How to Reliably Test for GMOs Jana Žel, Mojca Milavec, Dany Morisset, Damien Plan, Guy Van den Eede, Kristina Gruden, 2011-10-26 The detection of genetically modified organisms GMOs is becoming very complex with new GMOs approved and unapproved constantly entering world markets Traceability and labelling of GMOs is defined in regulations worldwide demanding accurate and reliable testing to support the requirements of legislation This Brief provides the current state of the art on all key topics involved in GMO testing and is a source of detailed practical information for laboratories Special focus is given to qualitative and quantitative real time PCR analysis relevant to all areas where detection and identification rely on nucleic acid based methods The following topics important for testing laboratories are also discussed organization of the laboratory focusing on aspects of the quality system and methods for testing validation and verification of methods and measurement uncertainty The Brief also discusses the new challenges

of GMOs and novel modified organisms using new technologies and the possible solutions for GMO detection including bioinformatics tools Finally legislation on GMOs and sources of information on GMOs are provided which are relevant not only to testing laboratories but to anyone interested in GMOs The authors of this Brief have many years of experience in GMO testing development of real time PCR methods implementation of quality system requirements validations and verification of methods and measurement uncertainty The National Institute of Biology is a highly qualified research laboratory and a National Reference Laboratory which also performs routine analyses of food feed and seed The Institute for Health and Consumer Protection of the European Union Joint Research Centre has extensive knowledge and experience of GMO detection It hosts the European Union Reference Laboratory for GM Food and Feed in addition to chairing the European Network of GMO Laboratories

Instructor's Manual for Food Analysis S. Suzanne Nielsen, 2012-12-06 The first and second editions of Food Analysis were widely adopted for teaching the subject of Food Analysis and were found useful in the food industry The third edition has been revised and updated for the same intended use and is being published with an accompanying laboratory manual Food Analysis Third Edition has a general information section that includes governmental regulations related to food analysis sampling and data handling as background chapters The major sections of the book contain chapters on compositional analysis and on chemical properties and characteristics of foods A new chapter is included on agricultural biotechnology GMO methods of analysis Large sections on spectroscopy chromatography and physical properties are included All topics covered contain information on the basic principles procedures advantages limitation and applications This book is ideal for undergraduate courses in food analysis and also is an invaluable reference to professions in the food industry

Testing and Analysis of GMO-containing Foods and Feed Salah E. O. Mahgoub, Leo M.L. Nollet, 2019-01-15 An increasing number of genetically modified organisms GMOs continues to be produced every day In response to the concerns raised by the development of GMOs and their incorporation in foods and feed guidelines and regulations to govern and control the use of GMOs and their products have been enacted These regulations necessitated the design of methods to detect and analyse the presence of GMOs or their products in agriculture produce food and feed production chains Design of techniques and instruments that would detect identify and quantify GM ingredients in food and feed will help inspection authorities to relay reliable information to consumers who might be concerned about the presence of GM ingredients Information generated by detection of GMOs in food and feed would be helpful for setting regulations that govern the use of GM components as well as for labeling purposes Qualitative detection methods of GM DNA sequences in foods and feeds have evolved fast during the past few years There is continuous need for the development of more advanced multi detection systems and for periodic updates of the databases related to these systems Testing and Analysis of GMO containing Foods and Feed presents updates and comprehensive views on the various methods and techniques in use today for the detection identification and quantification of GMOs in foods and feed The eleven book chapters cover recent

developments on sample preparation techniques immunoassays methods and the PCR technique used in GMO analysis the use of biosensors in relation to GMO analysis the application of nucleic acid microarrays for the detection of GMOs validation and standardization methods for GMO testing in addition to the type of reference material and reference methods used in GMO testing and analysis Some of the ISO standards designed for identifying and detecting the presence of GM material in foods are also presented in the book Training Manual on GMO Quantification, 2014 The content of this manual is based on the training course that was organised on the premises of the European Commission Joint Research Centre Institute for Reference Materials and Measurements Geel BE at the end of 2013 The training manual complements the training course that was intended to improve the quality of measurement results obtained when quantifying genetically modified organisms GMO in food and feed Both the training course and this manual were developed in line with the current EU GMO legislation The manual is addressed to laboratory managers and practitioners in analytical laboratories who perform GM quantification measurements and use reference materials for calibration quality control and method validation including in house verification It is also intended for analysts who need to assess measurement uncertainties as required by EC No 1829/2003 1 EC No 609/2011 2 and ISO IEC 17025:2005 This training document has been written by JRC IRMM upon request of the European Union Reference Laboratory for Genetically Modified Food and Feed EURL GMFF to further improve the reporting of National Reference Laboratories NRLs nominated under Regulation EC No 853/2004 and official GMO control laboratories within the EU This manual is organised in four chapters covering the proper calibration of PCR methods the estimation of measurement uncertainty the establishment of metrological traceability of a measurement result and the way to prove the trueness of measurement results The training manual is a didactic support of a previous guidance document that outlines issues related to the estimation of measurement uncertainty MU in the GMO sector The training manual is also in line with the European technical guidance document for the flexible scope accreditation of laboratories quantifying GMOs that is intended for laboratories that are acquiring or are holding a flexible scope of accreditation according to ISO IEC 17025

Genetically Engineered Foods Armando Mills, 2019-08-13 Genetically modified foods are foods derived from genetically modified organisms have had specific changes introduced into their DNA by genetic engineering techniques The main aim of genetically modified crops is to produce a food that is able to survive even if any harmful chemicals or pesticides or herbicides are sprayed Genetically engineered foods have had their DNA changed using genes from other plants or animals Scientists take the gene for a desired trait in one plant or animal and they insert that gene into a cell of another plant or animal Genetic engineering can be done with plants animals or bacteria and other very small organisms Genetic engineering allows scientists to move desired genes from one plant or animal into another Genes can also be moved from an animal to a plant or vice versa Genetic engineering also helps speed up the process of creating new foods with desired traits Genetically modified material sounds a little bit like science fiction territory but in reality much of what we eat on a daily basis is a

genetically modified organism Whether or not these modified foods are actually healthy is still up for debate and many times you don't even know that you are buying something genetically modified The book will be of help to researcher in the field of agriculture crop improvement biotechnology etc It will also be helpful to teachers and students for better understanding of the subject

Guidance Document on Measurement Uncertainty for GMO Testing Laboratories, 2009 This technical report outlines the technical issues related to the estimation of measurement uncertainty MU involved in the GMO sector In particular it gives guidance to GMO testing laboratories how to estimate the analytical variability of quantitative analytical results obtained by real time PCR This guidance document has been written on request of the European Network of GMO Laboratories ENGL as a follow up of a workshop on Measurement Uncertainty in the GMO sector organised by the Institute for Reference Materials and Measurements IRMM Geel Belgium and held on 05-07-2005 It is recognised that in order to be able to judge if an analytical results exceeds a threshold the MU must be estimated and reported together with the measurement result Enforcement Authorities shall therefore estimate the MU associated with an analytical result and use it to decide whether an analytical result falls within the specification of food and feed control The value obtained by subtracting the expanded uncertainty from the reported concentration is used to assess compliance Only if this value is greater than the legal threshold it is sure beyond reasonable doubt that the sample concentration of the analyte is beyond what is permissible Two selected approaches for the estimation of MU are presented in detail references to alternative approaches are given The first approach presented in detail is using data from collaborative trial in combination with in house quality control data for the estimation of MU Prerequisites for the use of such collaborative trial data are outlined In case no suitable collaborative trial data are available an alternative approach using data from within laboratory samples for the estimation of MU is presented
