

Geography Essay Writing Guidelines

Example Essay Paragraphs

The paragraphs below are provided as examples of relatively high standard of writing that takes into account the advice contained herein. They are written in response to the following question:

"The issue of greenhouse gas emissions has recently been placed at the top of the global environmental agenda. Discuss the reasons for this and assess the possible consequences of particular human reactions or inaction."

An example introduction

Projected increased global air temperature resulting from human-induced build up of "greenhouse gases" has, in the past decade, become the most important planetary environmental issue (IPCC 2013). Global warming is highly likely to detrimentally affect many important facets of the both biophysical and human environment and raises the possibility of significant loss of human lives and reductions in biodiversity (Sander 2015). The widespread predicted impacts of global warming, combined with a general consensus that warming has commenced, have led to an increasing acknowledgement of the problem at all levels of government (Hughes 2013). Nevertheless, variation in assessments and the spatial variability of predicted effects combine to hamper substantive action to reduce emissions (Bolt 2011).

An example paragraph (perhaps 3 or 4)

The Intergovernmental Panel on Climate Change (IPCC 2007) suggests that global temperatures will increase by an average of at least 0.5°C by 2050. This estimate, although useful for comparison with other predictions, hides the forecast variability in temperatures across the globe (Pittock 1993; IPCC 2003). In the Scandinavian Arctic mean summer temperatures are likely to be 5°C higher by 2050 (Jorgsen 1995), with slightly higher values predicted for the Canadian Arctic north of 60°N latitude (Smith 1998). Such increases will have dramatic effects on a wide variety of plants and animals.

Note: In the last sentence it is clear what the author thinks without having to say "I think..."

Another example paragraph (following from previous)

In Australia, significant increases in temperature are predicted. For example, South Australian summer temperatures will increase 2°C in the next thirty years (Jones 2002) and winter temperatures will rise by 1°C in the tropical north (Adamson 1999). However, these relatively minor changes in temperature regime contrast with the marked effect of changes in moisture balance (Pittock 1997; Whetton 2003). For example, in the West Australia wheat belt, lowered effective moisture may reduce production by 35% (Ogilvie 1999). It appears the South Australian wine industry will fare better since profit growth of \$100 million per year is still expected for the next three decades (Anon. 1999). All of these consequences are predicted to occur, and may or may not be reduced through human reaction.
