**Intelligent Systems for Engineering** Ram D. Sriram, 2012-12-06 When men of knowledge impart this knowledge I do not mean they will convince your reason I mean they will awaken in you the faith that it is so Sri Krishna Bhagavadgita BACKGROUND The use of computers has led to significant productivity increases in the engineering industry Most of the computer aided engineering applications were restricted to algorithmic computations such as finite element programs and circuit analysis programs However a number of problems encountered in engineering are not amenable to purely algorithmic solutions These problems are often ill structured the term ill structured problems is used here to denote problems that do not have a clearly defined algorithmic solution An experienced engineer deals with these ill structured problems using his/her judgment and experience

The knowledge based systems KBS technology which emerged out of research in artificial intelligence AI offers a methodology to solve these ill structured engineering problems. The emergence of the KBS technology can be viewed as the knowledge revolution. Other important events that led to increased productivity are the industrial revolution 17th century, the invention of the transistor and associated developments first half of the 20th century and the world wide web towards the end of the 20th century. Kurzweil in a lecture at MIT on December 3 1987 linked the progress of automation to two industrial revolutions: the first industrial revolution leveraged our physical capabilities whereas the second industrial revolution the knowledge revolution is expected to leverage our mental capabilities.
