Noise Control Manual David A. Harris,2013-03-09 Excessive noise levels are generally acknowledged to have adverse effects on our environment Studies indicate that excessive noise levels can cause fatigue in exposed individuals lower efficiency and productivity impaired speech communication and hearing loss Excessive noise is almost everywhere today in the office in schools hospitals and other institutional facilities in all classes of public buildings and in our factories INDUSTRIAL NOISE High noise levels in factories can make speech communication in the plant difficult and at times impossible Foremen are often unable to hear warning shouts from co workers The problem of hearing loss due to excessive noise exposure is of particular concern to industry and to the federal government In the early 1970s the United States Congress passed the Occupational Safety and Health Act OSHA which sets criteria for health hazards and established limits for noise exposure of industrial workers The OSHA Noise Standard was amended in 1982 to require audiometric testing of all employees exposed to noise levels of 85 dB or above for eight hours A NOISE IN COMMERCIAL AND INSTITUTIONAL BUILDINGS While noise levels in offices stores schools and other commercial and institutional buildings seldom reach those encountered in many industrial environments they often reach levels which are distracting to the occupants of such buildings Impairment of speech communication among workers or inversely the lack of speech privacy are both deterrents to efficiency and productivity and are detrimental to the occupants comfort and sense of well being

HVAC Commissioning Guidebook Maija Virta, 2021-03-31 Green buildings have become common in India and other countries in Asia. However, there is a concern regarding the performance of green buildings failing to meet the expectations of clients during the operation. One of the key reasons for this is poorly commissioned HVAC systems. In this publication, we provide tools and knowhow for more efficient HVAC commissioning. It gives answers for four major questions: why commissioning is needed, how to perform proper commissioning, which key performance issues of common HVAC equipment need to be considered, and what kind of checklists are used during commissioning. It covers the entire commissioning process beginning with the owner's project requirements and commissioning design reviews. Then it explains procedures during installation and start-up of equipment, followed by functional performance testing, seasonal commissioning, and 10 months operation review. This publication is developed by Indian Society of Heating Refrigeration and Air Conditioning Engineers (ISHRAE) for Indian and Asian requirements in conjunction with the Federation of European HVAC Associations (REHVA). The process steps described in this publication are in line with all major international building standards and green building certification schemes. Note: T F does not sell or distribute the Hardback in India, Pakistan, Nepal, Bhutan, Bangladesh, and Sri Lanka.

Technology for a Quieter America National Academy of Engineering, Committee on Technology for a Quieter America, 2010-10-30 Exposure to noise at home, at work, while traveling, and during leisure activities is a fact of life for all Americans. At times, noise can be loud enough to damage hearing, and at lower levels, it can disrupt normal living, affect sleep patterns, affect our ability to concentrate at work, interfere with outdoor recreational activities, and in some cases, interfere with communications and even cause accidents. Clearly, exposure to excessive noise can affect our quality of life. As the population of the United States and indeed the world increases, and developing countries become more industrialized, problems of noise are likely to become more pervasive and lower the quality of life for everyone. Efforts to manage noise exposures to design quieter buildings, products, equipment, and transportation vehicles, and to provide a regulatory environment that facilitates adequate, cost-effective, sustainable noise controls, require our immediate attention. Technology for a Quieter America looks at the most commonly identified sources of noise, how they are characterized, and efforts that have been made to reduce noise emissions and experiences. The book also reviews the standards and regulations that govern noise levels and the federal, state, and local agencies that regulate noise for the benefit, safety, and wellness of society at large. In addition, it presents the cost-benefit trade-offs between efforts to mitigate noise and the improvements they achieve, information sources available to the public on the dimensions of noise.

problems and their mitigation and the need to educate professionals who can deal with these issues Noise emissions are an issue in industry in communities in buildings and during leisure activities As such Technology for a Quieter America will appeal to a wide range of stakeholders the engineering community the public government at the federal state and local levels private industry labor unions and nonprofit organizations Implementation of the recommendations in Technology for a Quieter America will result in reduction of the noise levels to which Americans are exposed and will improve the ability of American industry to compete in world markets paying increasing attention to the noise emissions of products
