delineates the differences between the dynamics of various flight vehicles in a fundamental way It then focuses on the  
dynamic equations with application to these various flight vehicles concentrating more on aircraft and spacecraft cases Then  
the control systems analysis and design is carried out both from transfer function classical control as well as modern state  
space control points of view Illustrative examples of application to atmospheric and space vehicles are presented  
emphasizing the systems level viewpoint of control design Key features Provides a comprehensive treatment of dynamics and  
control of various flight vehicles in a single volume Contains worked out examples including MATLAB examples and end of  
chapter homework problems Suitable as a single textbook for a sequence of undergraduate courses on flight vehicle  
dynamics and control The book is essential reading for undergraduate students in mechanical and aerospace engineering
