

19.1. The hydrogeologic cross section on the figure illustrates the pattern of ground-water flow along a local flow system. Assume that the source of contamination develops with advection as the only

operative transport process. Describe the pathway for contaminant migration and estimate at what time in the future the plume will reach the stream.

19.2. Ground water flows through the left face of a cube of sandstone (1 m on a side) and out of the right face with a linear ground-water velocity of  $10^{-5} \text{ m/s}$ . The porosity of the sandstone is 0.10, and the effective diffusion coefficient is  $10^{-10} \text{ m}^2/\text{s}$ . Assume that a tracer has concentrations of 120, 100, and 80 mg/l (1.2, 1.0, and  $0.8 \times 10^5 \text{ mg/m}^3$ ) at the inflow face, the middle of the block, and the outflow face, respectively. Calculate the mass flux through the central plane due to advection and diffusion.

19.3. A contaminant is added as a point source to ground water flowing with a constant velocity of  $4 \times 10^{-6} \text{ m/s}$ . Assuming longitudinal and two transverse dispersivities (y- and z-directions) of 1.0, 0.1, and 0.01 m, determine the spatial standard deviations ( $\sigma_{x,y,z}$ ) in the plume size after 400 m of transport.

19.4. A series of hydraulic-conductivity measurements for an unconfined aquifer provide a mean hydraulic conductivity ( $\bar{Y}$ ) of 0.004 m/s, where  $Y = \ln K$ , a variance in the log-transformed hydraulic conductivity ( $\sigma_Y^2$ ) of 1.0, and a correlation length in the direction of the mean flow ( $\sigma_L$ ) of 10.0 m. Estimate the asymptotic macroscale dispersivity for the aquifer.

19.5. In Figure 19.19, look at the pattern of evolution in the  $\text{Br}^-$  concentration as a function of travel distance. Assume that at 237 days,  $\Gamma_L$  is equal to 24 m. Calculate the dispersion coefficient and the dispersivity for the aquifer.

Hydrogeology in Urban Areas, Urban Agglomerates and Industrial Centres Ken W.F. Howard, Rauf G. Israfilov, 2012-12-06

Groundwater issues have generated worldwide concern in recent decades. The problems are numerous: too little groundwater, too much groundwater, groundwater contaminated by either saline water or a broad spectrum of industrial and domestic pollutants. Many urban groundwater problems are not unique to any one region, which is the thinking behind this book. Many of the case studies presented here have never before been described in English. Overall, the papers represent the work and experience of researchers and groundwater professionals who have worked on urban groundwater issues in developed and less developed nations around the world. They reveal the magnitude and scope of the problem as well as identify future challenges, potential courses of action, and emerging technologies that offer hope for the future.

**Handbook of Applied Hydrologic and Water Resources Engineering** Raveendra Kumar Rai, Chandra Shekhar Prasad Ojha, Vijay P. Singh, 2025-02-26

The Handbook of Applied Hydrologic and Water Resources Engineering examines the planning and design of water supply systems, flood control works, drought mitigation measures, navigation facilities, and hydraulic structures, as well as feasibility and environmental impact studies for various water-related projects. It is based on the experience gained through consultancy in dealing with various water resources issues and problems, teaching, and research. It serves as a useful resource for graduate students and faculty members in civil engineering, agricultural engineering, and water resources engineering, as well as practicing engineers working in civil, environmental, and agricultural fields.

**Principles of Contaminant Hydrogeology** Christopher M. Palmer, 2019-07-23

This second edition features new and expanded coverage of contaminant hydrogeologic investigations. It presents a practical approach to completing investigations for environmental compliance, emphasizing the use of geologic principles in assessment to move sites toward cleanup. Stressing the basics of collecting data that can withstand regulatory scrutiny and achieve remediation, Principles of Contaminant Hydrogeology, Second Edition, demonstrates how to solve a client's site contamination problem while maximizing cost effectiveness. It focuses on small and medium-sized firms for which speed, accuracy, and cost are all crucial factors in the site assessment and closure process. Based on real-world problems, the book takes you step by step through the investigation and includes client, consultant, regulator, interaction, budgets, ethics, and data extrapolation for solving problems. It introduces concepts such as field logistics, drilling techniques, sampling protocols, contaminant movement, and remediation. Regulatory personnel, hydrogeological consultants, drilling contractors, remediation contractors, university instructors, and students will benefit from the wealth of information provided in this new edition.

**Hydrology** Ian Watson, 2017-11-13

Hydrology covers the fundamentals of hydrology and hydrogeology, taking an environmental slant dictated by the emphasis in recent times for the remediation of contaminated aquifers and surface water bodies, as well as a demand for new designs that impose the least negative impact on the natural environment. Major topics covered include hydrological principles, groundwater flow, groundwater contamination, and clean-up, groundwater applications to civil engineering, well hydraulics, and surface water.

Additional topics addressed include flood analysis flood control and both ground water and surface water applications to civil engineering design

**Hydrologic Frequency Modeling** V.P. Singh, 2012-12-06 Floods constitute a persistent and serious problem throughout the United States and many other parts of the world They are responsible for losses amounting to billions of dollars and scores of deaths annually Virtually all parts of the nation coastal mountainous and rural are affected by them Two aspects of the problem of flooding that have long been topics of scientific inquiry are flood frequency and risk analyses Many new even improved techniques have recently been developed for performing these analyses Nevertheless actual experience points out that the frequency of say a 100 year flood in lieu of being encountered on the average once in one hundred years may be as little as once in 25 years It is therefore appropriate to pause and ask where we are where we are going and where we ought to be going with regard to the technology of flood frequency and risk analyses One way to address these questions is to provide a forum where people from all quarters of the world can assemble discuss and share their experience and expertise pertaining to flood frequency and risk analyses This is what constituted the motivation for organizing the International Symposium on Flood Frequency and Risk Analyses held May 14 17 1986 at Louisiana State University Baton Rouge Louisiana
