

2.1 Citation Distribution within the Text

A study with a large amount of data from multiple disciplines was conducted by Boyack *et al.*⁵ They collected more than 5 million articles and used XML-based extraction techniques and CWTs parsing algorithms in their analysis. The results showed different citation patterns between subjects. The most citations occurred in the introduction, then they decreased in frequency in the next sections.

Other works using smaller datasets are limited to specific fields/journals. For example, Bertin *et al.* analysed 45,000 articles from PLOS journals.⁶ Their research found that the citation distribution in the text varies by journal series but that most citations are located in the introduction, followed by the results. Bu *et al.*⁷ collected 1,420 articles and Hsiao and Chen⁸ collected 4,255 articles to analyse publications in library and information science. They used almost the same techniques and agreed that the introduction and the beginnings of the chapters had the highest number of citations.

Cite Right, Second Edition Charles Lipson, 2011-05-15 In his bestselling guide *Doing Honest Work in College: How to Prepare Citations, Avoid Plagiarism and Achieve Real Academic Success*, veteran teacher Charles Lipson brought welcome clarity to the principles of academic honesty as well as to the often murky issues surrounding plagiarism in the digital age. Thousands of students have turned to Lipson for no-nonsense advice on how to cite sources properly and avoid plagiarism when writing their research papers. With his latest book *Cite Right*, Lipson once again provides much-needed counsel in a concise and affordable handbook for students and researchers. Building on *Doing Honest Work in College*, Lipson's new book offers a wealth of information on an even greater range of citation styles and details the intricacies of many additional kinds of sources. Lipson's introductory essay *Why Cite* explains the reasons it is so important to use citations and to present them accurately in research writing. In subsequent chapters, Lipson explains the main citation styles students and researchers are likely to encounter in their academic work: Chicago, MLA, APA, CSE, biological sciences, AMA, medical sciences, ACS, chemistry, mathematics and computer science, physics, astrophysics and astronomy, Bluebook and ALWD law, and AAA, anthropology and ethnography. His discussions of these styles are presented simply and clearly, with examples drawn from a wide range of source types crossing all disciplines from the arts and humanities to science, law and medicine. Based on deep experience in the academic trenches, *Cite Right* is an accessible one-stop resource, a must-have guide for students and researchers alike who need to prepare citations in any of the major disciplines and professional studies.

Conducting Research Lawrence T. Orcher, 2016-10-14 Prepares students to conduct their first empirical research study with quantitative and qualitative methods covered in detail. Common features as well as differences between the two research approaches are explored. Analysis and Visualization of Citation Networks Dangzhi Zhao, Andreas Strotmann, 2022-06-01 Citation analysis the exploration of reference patterns in the scholarly and scientific literature has long been applied in a number of social sciences to study research impact knowledge flows and knowledge networks It has important information science

applications as well particularly in knowledge representation and in information retrieval Recent years have seen a burgeoning interest in citation analysis to help address research management or information service issues such as university rankings research evaluation or knowledge domain visualization This renewed and growing interest stems from significant improvements in the availability and accessibility of digital bibliographic data both citation and full text and of relevant computer technologies The former provides large amounts of data and the latter the necessary tools for researchers to conduct new types of large scale citation analysis even without special access to special data collections Exciting new developments are emerging this way in many aspects of citation analysis This book critically examines both theory and practical techniques of citation network analysis and visualization one of the two main types of citation analysis the other being evaluative citation analysis To set the context for its main theme the book begins with a discussion of the foundations of citation analysis in general including an overview of what can and what cannot be done with citation analysis Chapter 1 An in depth examination of the generally accepted steps and procedures for citation network analysis follows including the concepts and techniques that are associated with each step Chapter 2 Individual issues that are particularly important in citation network analysis are then scrutinized namely field delineation and data sources for citation analysis Chapter 3 disambiguation of names and references Chapter 4 and visualization of citation networks Chapter 5 Sufficient technical detail is provided in each chapter so the book can serve as a practical how to guide to conducting citation network analysis and visualization studies While the discussion of most of the topics in this book applies to all types of citation analysis the structure of the text and the details of procedures examples and tools covered here are geared to citation network analysis rather than evaluative citation analysis This conscious choice was based on the authors observation that compared to evaluative citation analysis citation network analysis has not been covered nearly as well by dedicated books despite the fact that it has not been subject to nearly as much severe criticism and has been substantially enriched in recent years with new theory and techniques from research areas such as network science social network analysis or information visualization
