HYDRAULIC CIRCUIT

Power steering

C1 - Power steering circuit

The low pressure circuit consists of a low high pressure valve section to operate the power steering system. Oil from the low pressure stage of the pump (see Fig. 134) passes through filter (2) and supplies the Control steering valve system (3), after which it supplies the relative steering cylinder (5).

The oil supplied from the Control unit supplies the hydraulic power pack (4) and flows towards the various ports through a low pressure circuit.

The steering system mounted on MF 2200 tractor is

the hydrostatic type and there is no mechanical connection between the steering wheel and the steering cylinder.

Each maximum rotation of the steering wheel corresponds to an equivalent movement of the wheels.

If the engine breaks down or the hydraulic pump fails to operate, Control unit has a manual pump operated by the steering wheel allowing the steering action to be accomplished.
