

## UNIT 5: Earth's History

### LAB 5-2: MATCHING ROCK LAYERS

**OBJECTIVES:** After this activity, students will be able to: identify the relative ages of rock layers in a stratigraphic column; explain the principle of superposition; and describe the process of matching rock layers across a geographic divide.

**Background:** Earth's geology is a complex and constantly changing record of the forces that have shaped our planet. One of the most fundamental principles of geology is the principle of superposition, which states that in a sequence of rock layers, the oldest layer is at the bottom and the youngest layer is at the top. This principle is essential for understanding the history of the Earth.

**GOALS:** By the end of this activity, students will be able to: identify the relative ages of rock layers in a stratigraphic column; explain the principle of superposition; and describe the process of matching rock layers across a geographic divide.

#### Materials:

- Stratigraphic Column:** The relative ages of a rock unit or unit usually expressed in a specific time period.
- Rock Layers:** Layers of rock that are separated by a geographic divide.
- Matching:** Matching rock layers from different locations.

#### Procedure:

1. The first step in matching rock layers is to identify the relative ages of the rock layers.

1. Identify the relative ages of the rock layers by using the principle of superposition.
2. Match the rock layers across the geographic divide.

#### Discussion:

The principle of superposition states that in a sequence of rock layers, the oldest layer is at the bottom and the youngest layer is at the top. This principle is essential for understanding the history of the Earth.
