capacity of HSI to provide spectrally spatially and temporally detailed data favoured by e.g. hyperspectral snapshot technologies, miniaturized hyperspectral sensors and hyperspectral microscopy imaging. The present book comprises a suite of papers in various fields of environmental sciences: geology, mineral exploration, digital soil mapping, mapping and characterization of vegetation and sensing of water bodies including under ice and underwater applications. In addition, there are two rather methodically/technically oriented contributions dealing with the optimized processing of UAV data and on the design and test of a multi-channel optical receiver for ground-based applications. All in all, this compilation documents that HSI is a multi-faceted research topic and will remain so in the future.
