Interdisciplinary Research in Diabetology Ali Tootee,Bagher Larijani ,Ping Wang,2024-10-04 The prevalence of diabetes has alarmingly increased in both developed and developing countries in recent years The prevalence of different complications and comorbid conditions associated with diabetes has also rampantly increased thereby endangering the lives of patients with diabetes In fact obesity which is associated with diabetes is currently a major global public health concern Nevertheless it can be argued that little progress has been made in the field of the management of diabetes during the past decades and many believe that the discovery of insulin was not followed by further significant advancements in the management of diabetes Diagnostic and screening approaches to diabetes have considerably evolved in recent decades Saccharometers are replaced by glucometers and elaborated laboratory techniques However there are still limitations to such technologies and they cannot be used on large scales and in pediatric endocrinology they are not well complied with In fact it may be argued that the progress we have made in the management of diabetes has mainly focused on

the invention of more efficient insulin preparations and improved techniques for its delivery

Advances in Diabetes Technology Sarah Fishman, 2024-12-17 This book aims to provide the reader with a comprehensive overview of the most recent advances in the use of technology to support the treatment of diabetes. It discusses not only the evidence supporting these technologies but also the practicalities of their use. Few resources are available to guide the clinical provider in the choice and application of glucose sensing systems and insulin delivery devices to improve clinical outcomes. *Advances in Diabetes Technology* is intended to provide such a resource. While the use of these technologies is relatively common in the outpatient setting, their use in the inpatient setting is becoming increasingly common. This book is designed to help both the inpatient and outpatient clinical provider to recognize and understand diabetes technology and the ways in which it can be used during acute and critical illness. In addition, it explores software algorithms used to develop automated treatment plans and apps used by patients independently of direct involvement by their physician. Lastly, this book discusses do-it-yourself technologies used and developed by patients outside of the traditional care setting and without the professional guidance to modify and enhance existing technologies for customized use. The use of DIY diabetes technologies is promoted on social media and has been adopted by many younger patients. Familiarity with this emerging brand of diabetes technology is needed to ensure clinicians understand their patients and their management of diabetes.
