Plant Tissue Culture Manual - Supplement 7 K. Lindsey, 2013-11-11 Plant tissue culture has a long history dating back to the work of Gottlieb Haberlandt and others at the end of the 19th century but the associated concepts and techniques have reached a level of usefulness and application which has never been greater The technical innovations have given new insights into fundamental aspects of plant differentiation and development and have paved the way to the identification of strategies for the genetic manipulation of plants It is the aim of this manual to deliver a broad range of these techniques in a form which is accessible to students and research scientists of diverse backgrounds including those with little or no previous experience The themes of the manual aim to reflect those research areas which have been advanced by tissue culture technology As was the case for the sister volume Plant Molecular Biology Manual the objective has been from the start to produce a manual which is at home on the laboratory bench The plastic covered ring bound format has proved to be most popular and is retained here Equally the emphasis has been on producing a collection of detailed step by step protocols each supplemented with an introductory text and practical footnotes to provide the next best thing to a supervisor at one's shoulder

Chemical Signals in Vertebrates 10 R.T. Mason, Michael P. Lemaster, Dietland Müller-Schwarze, 2006-11-09 The editors and contributors to this volume should be justifiably proud of their participation in the tenth triennial meeting of the Chemical Signals in Vertebrates International Symposium This meeting was held 27 years after the initial gathering of participants in Saratoga Springs New York from June 6 to 9 1976 Subsequent meetings have been held every three years in Syracuse New York Sarasota Florida Laramie Wyoming Oxford England Philadelphia Pennsylvania Tübingen Germany Ithaca New York and Krakow Poland This tenth anniversary symposium was held from July 29 through August 1 in Corvallis Oregon and was hosted by the Zoology Department and Biology Programs of Oregon State University This book also represents the tenth in a series of books on chemical communication chemical ecology olfactory and vomeronasal research in vertebrate species The species covered in the chapters herein range from fish to mammals including humans By taxonomic breakdown the mammals are the most represented in number of species and chapter contributions However the hosts of the meeting endeavored to have some representative contributions covering all of the major vertebrate taxa As in past years the meeting was well represented with just over 100 participants from 13 different nations Plenary talks focused on some of the non mammalian groups that have tended to be less represented in these symposia Thus we had a very nice overview of comparisons and contrasts of invertebrate chemical communication to vertebrate systems **Spectral Methods in Food**

Transport of Fertilisers in Grassland Soils Alice Fiona Charteris, 2019-10-28 This book presents innovative research on soil nitrogen cycling and nitrate leaching with a view to improving soil management and fertiliser nitrogen use efficiency and reducing nitrogen leaching losses In this regard nitrogen 15 ¹⁵N labelled fertiliser was used as a biochemical and physical stable isotope tracer in laboratory and field experiments The major outcome of the research was the development validation and application of a new compound specific amino acid ¹⁵N stable isotope probing method for assessing the assimilation of

fertiliser nitrogen by soil microbial biomass The novelty of the method lies in its tracing of incorporated nitrogen into newly biosynthesised microbial protein in time course experiments using gas chromatography combustion isotope ratio mass spectrometry The approach provides previously unattainable insights into the microbial processing of different nitrogen fertilisers in different soils Further it identifies the mechanistic link between molecular scale processes and observations of field scale fertiliser nitrogen immobilisation studies The method and the results presented here will have far reaching implications for the development of enhanced recommendations concerning farm based soil management practices for increasing soil productivity and reducing nitrogen losses which is essential to minimising environmental impacts

Atmospheric Greenhouse Gases: The Hungarian Perspective László Haszpra, 2010-10-29 Human induced global climate change is the biggest challenge humankind faces today Increasing amount of atmospheric greenhouse gases play a crucial role in the evolution of the climate Without the understanding of the contributing processes feedbacks and interactions we cannot predict the future changes and develop effective mitigation strategies To decrease the uncertainty of the global studies detailed regional studies are needed surveying the regional characteristics of the atmospheric greenhouse gas budget and the influencing factors Atmospheric Greenhouse Gases The Hungarian Perspective covers a coherent subset of the Hungarian climate change oriented research that is directly related to greenhouse gases Topics discussed in the book range from the monitoring of the concentrations and fluxes of atmospheric greenhouse gases through the modeling of atmosphere biosphere interaction and greenhouse gas exchange processes to the review of the anthropogenic contribution of Hungary to the greenhouse gas budget of the atmosphere The studies call the attention to the regional properties which may modulate the European scale or global picture on the variation of atmospheric greenhouse gases
