Programming Guide

Application Note 401-9

Device Introduction

The HP 6002A DC Power Supply¹ employs a unique extended range technique which allows it to furnish maximum output power over a wide range of voltage and current combinations. The supply can provide a full 200 watts of output from 20V, 10A to 50V, 4A. The output is fully adjustable through the entire operating range of +0 to +50 volts and 0 to 10 amps by front-panel voltage and current controls.

Option 001, the HP-IB interface allows the supply to be digitally controlled from a calculator, computer, or other controller. Either the output voltage or current can be programmed.

A pair of switches on the rear panel of the supply allows selection of any one of three modes of operation: local, HP-IB constant voltage (CV), or HP-IB constant current (CC). The 6002A acts only as a listener on the bus.

Addressing

Before the 6002A can accept programming information, it must be addressed to listen. The 6002A has listener capability only. The switches which allow the 6002A to be addressed as a listener are located on the rear panel. They are in the upper right hand-corner of the box, just to the right of the HP-IB connector.

There are seven switches, but only the left five are used. Note that the 6002A address cannot be read directly off of the rear panel in binary. The least significant bit is farthest to the left as shown in figure 9-1. The octal address shown is 5.

Constant voltage (CV) or constant current (CC) operation must also be set (also shown in figure 9-1). The HP-IB option 001 circuits are factory adjusted for CV operation². See the "Programming" section for more details.

¹The 6002A Operating and Service Manual (06002-90001), the HP-IB Power Supply Interface Guide (5952-2990), and Application Note 401-1 (5953-2800) should be used with this note.

²Constant current (CC) adjustments are also discussed in Appendix A of the 6002A Operating and Service Manual (06002-90001).

System Preparations

LU Assignment

One logical unit should be assigned to the 6002A. Assuming the switches are set to an address of 5 as shown in figure 9-1, the LU assignment may be performed from File Manager.

```
:SYLU,17,10,5B
```

This statement would assign LU 17 to equipment table 10. The device address associated with LU 17 would be 5.
