Insect Hydrocarbons Gary J. Blomquist, Anne-Geneviève Bagnères, 2010-02-04 A unique and critical analysis of the wealth of research conducted on the biology, biochemistry and chemical ecology of the rapidly growing field of insect cuticular hydrocarbons. Authored by leading experts in their respective fields, the twenty chapters show the complexity that has been discovered in the nature and role of hydrocarbons in entomology. Covers in great depth aspects of chemistry, structures, qualitative and quantitative analysis, biochemistry, biosynthesis, molecular biology, genetics, evolution, physiology, taxonomy and ecology. Clearly presents to the reader the array of data, ideas, insights and historical disagreements that have been accumulated during the past half century. An emphasis is placed on the role of insect hydrocarbons in chemical communication, especially among the social insects. Includes the first review on the chemical synthesis of insect hydrocarbons. The material presented is a major resource for current researchers and a source of ideas for new researchers.

Key Issues in Petroleum Geology F. John Gregory, Philip Copestake, Julian M. Pearce, 2007 This volume contains a compilation of 17 seminal papers taken from various Geological Society Special Publications and the Journal of the Geological Society on the use and application of stratigraphy in petroleum geology over the last 20 years. The volume focuses on case studies in fundamental stratigraphy applied and integrated stratigraphy and alternative methods of stratigraphy. The book is introduced with an original scientific and historical review of the subject; all papers are set in context with both the benefits of the techniques and some of the shortcomings highlighted. By compiling these papers, commercial stratigraphers John Gregory, Philip Copestake and Julian Pearce have created a volume intended for a wide readership. However, it is of particular relevance for the training of undergraduate students studying courses on petroleum geology, basin development and sequence stratigraphy, as well as for all postgraduate students working in petroleum-related scientific fields. It is also intended as a volume of general use for geoscientists entering the petroleum industry as well as current workers requiring an overview.

The metabolic pathways and environmental controls of hydrocarbon biodegradation in marine ecosystems Joel E. Kostka, Andreas P. Teske, Samantha B. Joye, Ian Head, 2015-05-15 Biodegradation mediated by indigenous microbial communities is the ultimate fate of the majority of oil hydrocarbon that enters the marine environment. The aim of this Research Topic is to highlight recent advances in our knowledge of the pathways and controls of microbially catalyzed hydrocarbon degradation in marine ecosystems with emphasis on the response of microbial communities to the Deepwater Horizon oil spill in the Gulf of Mexico. In this Research Topic, we encouraged original research and reviews on the ecology of hydrocarbon-degrading bacteria, the rates and

mechanisms of biodegradation and the bioremediation of discharged oil under situ as well as near in situ conditions
