Poon, P.P. Banerjee, 2001-04-18 This book serves two purposes first to introduce readers to the concepts of geometrical optics physical optics and techniques of optical imaging and image processing and secondly to provide them with experience in modeling the theory and applications using the commonly used software tool MATLAB A comprehensively revised version of the authors earlier book Principles of Applied Optics Contemporary Optical Image Processing with MATLAB brings out the systems aspect of optics This includes ray optics Fourier Optics Gaussian beam propagation the split step beam propagation method holography and complex spatial filtering ray theory of holograms optical scanning holography acousto optic image processing edge enhancement and correlation using photorefractive materials holographic phase distortion correction to name a few MATLAB examples are given throughout the text MATLAB is emphasized since it is now a widely accepted software tool very routinely used in signal processing A sizeable portion of this book is based on the authors own in class presentations as well as research in the area Instructive problems and MATLAB assignments are included at the end of each Chapter to enhance even further the value of this book to its readers MATLAB is a registered trademark of The MathWorks Inc **Optical Communications from a Fourier Perspective** Pelle Jeppesen, Bjarne Tromborg, 2023-11-17 Optical Communications from a Fourier Perspective Fourier Theory and Optical Fiber Devices and Systems covers a broad range of subjects spanning

Fourier theory and signal analysis over photonic components including time lenses in optical communication. Some of the theory is more generally applicable beyond optical communication and is of relevance also for communications engineering. The Fourier theory dimension of the book presents the relationship between Fourier series and Fourier integrals and also the related Laplace transform. The book covers wave propagation in optical waveguides based on Maxwell equations and the nonlinear Schrödinger equation. Various modulation formats are addressed along with coherent detection and required bandwidth. Optical Fourier transform in the form of time lens is covered for example in modulation format conversion and spectrum magnification and couplers and their use for optical discrete Fourier transformation are also discussed. Other important subjects such as noise linewidth and coherence are discussed in relation to semiconductor lasers. Detailed derivations and a deeper background for the chapters are provided in appendices where appropriate. Introduces Fourier theory and signal analysis tailored to applications in optical communications devices and systems. Provides a strong theoretical background and a ready resource for researchers and advanced students in optical communication and optical signal processing. Starts from basic theory and then develops descriptions of useful applications. **Optical Fiber**

Communication Systems with MATLAB® and Simulink® Models Le Nguyen Binh, 2014-12-01. Carefully structured to instill practical knowledge of fundamental issues. Optical Fiber Communication Systems with MATLAB and Simulink Models describes the modeling of optically amplified fiber communications systems using MATLAB and Simulink. This lecture based book focuses on concepts and interpretation, mathematical procedures and engineering. **Optical and Wireless**

Technologies Vijay Janyani, Manish Tiwari, Ghanshyam Singh, Paolo Minzioni, 2018-02-12. This book presents selected papers from 1st International Conference on Optical and Wireless Technologies providing insights into the analytical, experimental and developmental aspects of systems, techniques and devices in these spheres. It explores the combined use of various optical and wireless technologies in next generation networking applications and discusses the latest developments in applications such as photonics, high speed communication systems and networks, visible light communication, nanophotonics and wireless and multiple input multiple output MIMO systems. The book will serve as a valuable reference resource for academics and researchers across the globe. **Photonic Crystals** Igor A. Sukhoivanov, Igor V. Guryev, 2009-09-21. The

great interest in photonic crystals and their applications in the last 15 years is being expressed in the publishing of a large number of monographs, collections, textbooks and tutorials where existing knowledge concerning operation principles of photonic crystal devices and microstructured fibers is described well. Known and novel applications of such technologies in photonics and optical communications are presented. They challenge authors of new books to cover the gaps still existing in the literature and highlight and popularize already known material in a new and original manner. Authors of this book believe that the next step towards wide application of photonic crystals is the solution of many practical problems of design and computation of the specific photonic crystal based devices.

aimed at the specific technical application. In order to make this step it is necessary to increase the number of practitioners who can solve such problems independently. The aim of this book is to extend the group of researchers, developers and students who could practically use the knowledge on the physics of photonic crystals together with the knowledge and skills of independent calculation of basic characteristics of photonic crystals and modeling of various elements of integrated circuits and optical communication systems created on the basis of photonic crystals. The book is intended for qualified readers: specialists in the field of optics and photonics, students of higher courses, master degree students and PhD students. As an introduction to the subject, the book contains the basics of wave optics and radiation propagation in simple guiding media such as planar waveguides and step index fibers.

Simulations and Optical Diagnostics for Internal Combustion Engines Akhilendra Pratap Singh, Pravesh Chandra Shukla, Joonsik Hwang, Avinash Kumar Agarwal, 2019-10-11. This book focuses on combustion simulations and optical diagnostics techniques which are currently used in internal combustion engines. The book covers a variety of simulation techniques including in-cylinder combustion, numerical investigations of fuel spray and effects of different fuels and engine technologies. The book includes chapters focused on alternative fuels such as DME, biomass alcohols etc. It provides valuable information about alternative fuel utilization in IC engines. Use of combustion simulations and optical techniques in advanced techniques such as microwave assisted plasma ignition, laser ignition etc. are few other important aspects of this book. The book will serve as a valuable resource for academic researchers and professional automotive engineers alike.
