The Mazda Wankel engines a type of rotary combustion engine comprise a family of car engines derived from experiments in
the early 1960s by Felix Wankel a German engineer Over the years displacement has been increased and turbocharging has
been added Wankel engines can be classified by their geometric size in terms of radius rotor center to tip distance also the
median stator radius and depth rotor thickness and offset crank throw eccentricity also 1 4 the difference between stator s
major and minor axes These metrics function similarly to the bore and stroke measurements of a piston engine Displacement
is $3 \times 3 \times \text{radius} \times \text{offset} \times \text{depth}$ multiplied with the number of rotors note that this only counts a single face of each rotor as the
entire rotor s displacement and is of course incorrect as there are three faces equivalent to three piston faces per rotor i e
equivalent to a three cylinder radial piston motor per rotor Nearly all Mazda production Wankel engines share a single rotor
radius 105 mm 4 1 in with a 15 mm 0 6 in crankshaft offset The only engine to diverge from this formula was the rare 13A
which used a 120 mm 4 7 in rotor radius and 17 5 mm 0 7 in crankshaft offset Mazda rotary engines have a reputation for
being relatively small and powerful at the expense of poor fuel efficiency They started to become popular with kit car
builders hot rodders and in light aircraft because of their light weight compact size and tuning potential stemming from their
