*G.A.M.E. Games: Autonomy, Motivation & Education* Menno Deen, 2015-05-21 This thesis reviews and utilizes concepts from cognitive psychology, developmental psychology, and game design to bring forth a number of design principles for educational games that may improve students' motivation to learn. Its main contribution is a novel approach to serious game design, namely envisioning play and learning as a restructuring practice. This change of perspective from a formal game design approach focused on rules and regulations towards a more activity-centered approach focused on process and style may help designers to leverage the motivational potential of games in order to make education more engaging to students.
