Sher, R.J. Daverman, 2001-12-20 Geometric Topology is a foundational component of modern mathematics involving the study of spacial properties and invariants of familiar objects such as manifolds and complexes This volume which is intended both as an introduction to the subject and as a wide ranging resouce for those already grounded in it consists of 21 expository surveys written by leading experts and covering active areas of current research They provide the reader with an up to date overview of this flourishing branch of mathematics **Geometric Folding Algorithms** Erik D. Demaine, Joseph O'Rourke, 2007-07-16 Did you know that any straight line drawing on paper can be folded so that the complete drawing can be cut out with one straight scissors cut That there is a planar linkage that can trace out any algebraic curve or even sign your name Or that a Latin cross unfolding of a cube can be refolded to 23 different convex polyhedra Over the past decade there has been a surge of interest in such problems with applications ranging from robotics to protein folding With an emphasis on algorithmic or computational aspects this treatment gives hundreds of results and over 60 unsolved open problems to inspire further research The authors cover one dimensional 1D objects linkages 2D objects paper and 3D objects polyhedra Aimed at advanced undergraduate and graduate students in mathematics or computer science this lavishly illustrated book will fascinate a broad audience from school students to researchers Preschool Geometry Esther Levenson, Dina Tirosh, Pessia Tsamir, 2012-01-01 Recently the issue of early childhood mathematics has come to the fore and with it the importance of teaching geometrical concepts and reasoning from a young age Geometry is a key domain mentioned in many national curricula and may also support the learning of other mathematical topics such as number and patterns This book is based on the rich experience research and practice of the authors and is devoted entirely to the learning and teaching of geometry in preschool The first part of the book is dedicated to children s geometrical thinking building concept images in line with concept definitions and the dilemmas that arise in the process The second part focuses on geometrical tasks and their role in developing and assessing geometrical reasoning The third part focuses on teaching

geometry to young children Each of the three parts is structured in a similar manner beginning with general theory and research continuing with specific examples related to those theories and moving on to elements of actual practice Written in a meaningful yet enjoyable manner any person who has an interest in the mathematics education of preschool children be it parents caregivers teachers teacher educators and researchers will find this book relevant Information Engineering for Ports and Marine Environments Lin Mu,Lizhe Wang,Mingwei Wang,2020-04-23 Information Engineering for Port and Marine Environments provides the technology of tidal level prediction the technology of oil spill early warning and the research for the theory of storm sedimentation the construction for monitor ability the early warning service for numerical simulation and operational which involves many aspects such as theoretical research system establishment and application of information technology et al Because of the certain prospective and advancement of multiple work it will play a positive role in promoting the related technology of the field There are several of important offshore ports in China such as Tianjin port Yangshan Port Ningbo Zhoushan port Huanghua port et al most of them are located in the coast of muddy and muddy silty and the depth of water is shallow the sediment deposition is serious the large ship is operated by tide In order to sufficiently keep the rapid and stable economic growth in bay estuary and delta guarantee the security of port channel maritime oceanic engineering and resource development of oil and gas and better escort for the social economy activities it is essential to provide the information service of sediment and ocean hydrometeorology with width coverage and forecasting and warning information It is all the latest research results in the book which involves many fields such as physical oceanography meteorology biology chemistry geology environment transportation and law and so on The development of information assurance and prediction system for port shipping and ocean environment is a huge and arduous project It is too hasty to finish the book due to the limited knowledge of the author the careless is unavoidable cordially invites the readers to point out Features An entire system to forecast the port shipping and ocean environment information is proposed including what is the port shipping and ocean environment information The concept of port shipping and ocean environment data integration is presented and the essential modules are built for the ocean dynamics model The high performance port shipping and ocean environment data processing system is constructed and the model dataset and geographic information is obtained to build the basic database The application of information assurance technology for port shipping and ocean environment is conducted at Tianjin port and Yangshan Port This book is meant for senior undergraduates and postgraduate students in the fields of geoinformatics Port engineering and Marine engineering Engineers and technicians in the related fields can also use it for reference
