Anisotropic Media and Seismic Fracture Characterization SEG Geophysical References Series No 17 presents a systematic analysis of seismic signatures for azimuthally anisotropic media and describes anisotropic inversion processing methods for wide azimuth reflection data and VSP vertical seismic profiling surveys The main focus is on kinematic parameter estimation techniques operating with P waves as well as with the combination of PP and PS mode converted data The part devoted to prestack amplitudes includes azimuthal AVO amplitude variation with offset analysis and a concise treatment of attenuation coefficients which are highly sensitive to the presence of anisotropy Discussion of fracture characterization is based on modern effective media theories and illustrates both the potential and limitations of seismic methods Field data examples highlight the improvements achieved by accounting for anisotropy in seismic processing imaging and fracture detection
