Orr's Circle of the Sciences: Organic nature, vols. 1-3 (1854-1856) William Somerville Orr, 1854 *Systems, Machines, and Problem-Solving* Henri Stephanou, 2025-10-20 The notion of problem solving has become central to science education and the cognitive sciences but it is still peripheral to many philosophies of knowledge and science In fact the term only became popular in the course of the twentieth century as humanity's ability to solve theoretical and practical problems grew at a seemingly exponential rate This book questions both the nature of problem solving and its effectiveness in transforming our human practices We argue that this is linked to the idea that some of our enquiries can be summarized in systematic procedures Examples are the proof of a theorem within an axiomatic theory a production line within an industrial factory or an administrative procedure within a bureaucratic system Although such a form has been common in mathematics since antiquity it was only in modern times that the possibility of being systematic in the natural sciences and technical disciplines was discovered The emergence of the modern concepts of system and machine was key to this expansion and to the scientific industrial and digital revolutions Problem solving thus appears as the fundamental form of the modern concept of knowledge

Thinking Geometrically Thomas Q. Sibley, 2015-08-14 Thinking Geometrically A Survey of Geometries is a well written and comprehensive survey of college geometry that would serve a wide variety of courses for both mathematics majors and mathematics education majors Great care and attention is spent on developing visual insights and geometric intuition while stressing the logical structure historical development and deep interconnectedness of the ideas Students with less mathematical preparation than upper division mathematics majors can successfully study the topics needed for the preparation of high school teachers There is a multitude of exercises and projects in those chapters developing all aspects of geometric thinking for these students as well as for more advanced students These chapters include Euclidean Geometry Axiomatic Systems and Models Analytic Geometry Transformational Geometry and Symmetry Topics in the other chapters including Non Euclidean Geometry Projective Geometry Finite Geometry Differential Geometry and Discrete Geometry provide a broader view of geometry The different chapters are as independent as possible while the text still manages to highlight the many connections between topics The text is self contained including appendices with the material in Euclid's first book and a high school axiomatic system as well as Hilbert's axioms Appendices give brief summaries of the parts of linear algebra and multivariable calculus needed for certain chapters While some chapters use the language of groups no prior experience with abstract algebra is presumed The text will support an approach emphasizing dynamical geometry
