Research for Educational Change Jill Adler, Anna Sfard, 2016-06-17 Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice Focussing its discussion within the context of mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching the question of how these effects are to be generated and sustained is far from evident The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice In the first part of the book four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research

**Evidence into Education** Stephen Gorard, 2020-03-31 Worldwide there has been considerable progress in the quality of research evidence generated for use in education but not the equivalent growth in knowledge of how best to get this evidence into actual use. Yet with far-reaching implications, all of education is damaged when persuasive but poor quality evidence has widespread influence or good research lies unused. Focused on the work of the Durham University Evidence Centre for Education, *Getting Evidence into Education* addresses this problem, examining what can be done to improve the take-up of suitable research evidence and inform the public service of education. Containing a variety of case studies from evidence-based policies for early childhood education in Brazil to the use of evidence on contextualized admissions to Scottish universities, the volume explores a variety of different ways to approach the problem, addressing the questions: What is the existing evidence on different approaches to getting research evidence into use? What are the factors which influence the uptake of high quality research evidence by policy or practice? Which are the most effective pathways for evidence into use in particular contexts? Considering both the practical and ethical implications, the book builds towards key recommendations for the research community, practitioner bodies and policy makers and advisors, directing them on how to communicate better with each other for the benefit of everyone. *Debates in Mathematics Education* Gwen Ineson, Hilary Povey, 2020-06-15
