Perfect Pairs, K-2 Melissa Stewart,Nancy Chesley,2023-10-10 Hands on

lessons can be fun and compelling but when it comes to life science they aren't always possible, practical, effective, or safe. Children can't follow a lion as it stalks a gazelle, visit the exotic kapok tree in a rain forest, or swim alongside the underwater life in a pond. But they can explore a whole world of animals, plants, and ecosystems through the pages of beautifully illustrated science-themed picture books. Perfect Pairs, which marries fiction and nonfiction picture books focused on life science, helps educators think about and teach life science in a whole new way. Each of the twenty-two lessons in this book is built around a pair of books that introduces a critical life science concept and guides students through an inquiry-based, investigative process to explore that idea from animal environment interactions to the role of structure in plant and animal survival, from inheritance of traits to variation of species. Each lesson starts with a Wonder Statement and comprises three stages: Engaging Students features a hands-on activity that captures student interest, uncovers current thinking, and generates vocabulary; The heart of the investigative process, Exploring with Students, spotlights the paired books as the teacher reads aloud and helps students find and organize information into data tables; Encouraging Students to Draw Conclusions shows students how to review and analyze the information they have collected. Bringing high-quality science-themed picture books into the classroom engages a broad range of students, addresses the Performance Expectations outlined in the Next Generation Science Standards, and supports the goals of the Common Core State Standards for English Language Arts. Even if you are science-shy, Perfect Pairs can help you become a more confident teacher whose classroom buzzes with curious students eager to explore their natural world.

Teaching and Learning STEM Richard M. Felder, Rebecca Brent, 2016-02-22

Rethink traditional teaching methods to improve student learning and retention in STEM. Educational research has repeatedly shown that compared to traditional teacher-centered instruction, certain learner-centered methods lead to improved learning outcomes, greater development of critical high-level skills, and increased retention in science, technology, engineering, and mathematics (STEM) disciplines. *Teaching and Learning STEM* presents a trove of practical, research-based strategies for designing and teaching STEM courses at the university, community college, and high school levels. The book draws on the authors' extensive backgrounds and decades of experience in STEM education and faculty development. Its engaging and well-illustrated descriptions will equip you to implement the strategies in your courses and to deal effectively with problems, including student resistance, that might occur in the implementation. The book will help you plan and conduct class sessions in which students are actively engaged, no matter how large the class is. Make good use of technology in face-to-face, online, and hybrid courses and flipped classrooms. Assess how well students are acquiring the knowledge, skills, and conceptual understanding the course is designed to teach. Help students develop expert problem-solving skills and skills in communication, creative thinking, critical thinking, high performance teamwork, and self-directed learning. Meet the learning needs of STEM students with a broad diversity of attributes and backgrounds. Ann Renninger, Martina Nieswandt, Suzanne Hidi, 2015-04-19 Interest in Mathematics and Science Learning edited by K Ann
Renninger Martin Nieswandt and Suzanne Hidi is the first volume to assemble findings on the role of interest in mathematics
and science learning As the contributors illuminate across the volume s 22 chapters interest provides a critical bridge
between cognition and affect in learning and development This volume will be useful to educators researchers and policy
makers especially those whose focus is mathematics science and technology education **Engaging with Contemporary
Challenges through Science Education Research** Olivia Levrini, Giulia Tasquier, Tamer G. Amin, Laura Branchetti, Mariana
Levin, 2021-09-24 This book starts with the premise that beauty can be an engine of transformation and authentic
engagement in an increasingly complex world It presents an organized picture of highlights from the 13th European Science
Education Research Association Conference ESERA 2019 held in Bologna Italy The collection includes contributions that
discuss contemporary issues such as climate change multiculturalism and the flourishing of new interdisciplinary areas of
investigation including the application of cognitive neuroscience artificial intelligence and digital humanities to science
education research It also highlights learners difficulties engaging with socio scientific issues in a digital and post truth era
The volume demonstrates that deepening our understanding is the preferred way to address these challenges and that
science education has a key role to play in this effort In particular the book advances the argument that the deep and novel
character of these challenges requires a collective search for new narratives and languages an expanding knowledge base
and new theoretical perspectives and methods of research The book provides a contemporary picture of science education
research and looks to the theoretical and practical societal challenges of the future
