Quantum Physics is NOT Weird Paul J. van Leeuwen, 2022-02-26 Quantum Physics shows us that we create what we observe Countless experiments confirm that it is our information which manifests reality Matter and time are created by our observation This is not only true when we do experiments in laboratories but it works the same way in everyday reality We manifest our own experiences Science does not prove that our consciousness must be a product of our material brain On the contrary Consciousness emerging from the brain is just a belief This book tells the story how physics did develop from a quest to understand nature into its current highly myopic materialistic paradigm The profound spiritual message of Quantum Physics is ignored to our detriment A wonderful very readable book that will convince thousands upon thousands of serious readers including students of science why consciousness is necessary to understand quantum physics and why materialist science is not adequate I give the book my highest recommendation Amit Goswami PhD author of The Self Aware Universe A monumental book A masterpiece in disguise Prof Emer dr Dirk K F Meijer University of Groningen

Spectral Approach to Transport Problems in Two-Dimensional Disordered Lattices Evdokiya Georgieva Kostadinova, 2018-12-11 This book introduces the spectral approach to transport problems in infinite disordered systems characterized by Anderson type Hamiltonians The spectral approach determines with probability one the existence of extended states for nonzero disorder in infinite lattices of any dimension and geometry Here the author focuses on the critical 2D case where previous numerical and experimental results have shown disagreement with theory Not being based on scaling theory the proposed method avoids issues related to boundary conditions and provides an alternative approach to transport problems where interaction with various types of disorder is considered Beginning with a general overview of Anderson type transport problems and their relevance to physical systems it goes on to discuss in more detail the most relevant theoretical numerical and experimental developments in this field of research The mathematical formulation of the innovative spectral approach is introduced together with a physical interpretation and discussion of its applicability to physical systems followed by a numerical study of delocalization in the 2D disordered honeycomb triangular and square lattices Transport in the 2D honeycomb lattice with substitutional disorder is investigated employing a spectral analysis of the quantum percolation problem Next the applicability of the method is extended to the classical regime with an examination of diffusion of lattice waves in 2D disordered complex plasma crystals along with discussion of proposed future developments in the study of complex transport problems using spectral theory
