Handbook of Disaster Research Havidán Rodríguez, William Donner, Joseph E. Trainor, 2017-11-16 This timely Handbook is based on the principle that disasters are social constructions and focuses on social science disaster research It provides an interdisciplinary approach to disasters with theoretical methodological and practical applications Attention is given to conceptual issues dealing with the concept disaster and to methodological issues relating to research on disasters These include Geographic Information Systems as a useful research tool and its implications for future research This seminal work is the first interdisciplinary collection of disaster research as it stands now while outlining how the field will continue to grow

Geospatial Technologies and Homeland Security Daniel Sui, 2008-05-25 Homeland security and context In the Geographical Dimensions of Terrorism GDOT Cutter et al 2003 the first book after 9 11 to address homeland security and geography we developed several thematic research agendas and explored intersections between geographic research and the importance of context both geographical and political in relationship to the concepts of terrorism and security It is good to see that a great deal of new thought and research continues to flow from that initial research agenda as illustrated by many of the papers of this new book entitled Geospatial Technologies and Homeland Security Research Frontiers and Future Challenges Context is relevant not only to understanding homeland security issues broadly but also to the conduct of research on geospatial technologies It is impossible to understand the implications of a homeland security strategy let alone hope to make predictions conduct meaningful modeling and research or assess the value and dangers of geospatial technologies without consideration of overarching political social economic and geographic contexts within which these questions are posed

Risk Assessment, Modeling and Decision Support Ann Bostrom, Steven P. French, Sara J. Gottlieb, 2008-02-10 The papers in this volume integrate results from current research efforts in earthquake engineering with research from the larger risk assessment community The authors include risk and hazard researchers from the major U S hazard and earthquake centers The volume lays out a road map for future developments in risk modeling and decision support and positions earthquake engineering research within the family of risk analysis tools and techniques

Multi-hazard Approaches to Civil Infrastructure Engineering Paolo Gardoni, James M. LaFave, 2016-06-22 This collection focuses on the development of novel approaches to address one of the most pressing challenges of civil engineering namely the mitigation of natural hazards Numerous engineering books to date have focused on and illustrate considerable progress toward mitigation of individual hazards earthquakes wind and so forth The current volume addresses concerns related to overall safety sustainability and resilience of the built environment when subject to multiple hazards natural disaster events that are concurrent and either correlated e g wind and surge uncorrelated e g earthquake and flood cascading e g fire following earthquake or uncorrelated and occurring at different times e g wind and earthquake The authors examine a range of specific topics including methodologies for vulnerability assessment of structures new techniques to reduce the system demands through control systems instrumentation monitoring and condition assessment of structures and foundations new techniques for repairing structures that have suffered damage during past events or for structures that have been found in need of strengthening development of new design provisions that consider multiple hazards as well as questions from law and the humanities relevant to the management of natural and human made hazards

Hurricane Risk in a Changing Climate Jennifer M. Collins, James M. Done, 2022-09-15 How is a changing climate affecting hurricanes and how are these changes intersecting with our changing exposure and vulnerability in ways that affect tropical cyclone risk Crucially how should this understanding be incorporated into risk management practice This book takes a cross sectoral look at how damaging tropical cyclone characteristics are changing and presents novel approaches to integrate science with risk assessment In this new era of tropical cyclone impacts understanding effective risk management practice in a changing climate is more important than ever This book details the outcomes of new research focusing on climate risk related to hurricanes in a changing climate Topics include characteristics of tropical cyclone risk perspectives on hurricane risk management strategies in the built environment and implications for commercial risk Inspired by the Symposium on Hurricane Risk in a Changing Climate this book brings together leading international academics and researchers and provides a source reference for both risk managers and climate scientists for research on the interface between tropical cyclones climate and risk 8 chapters are available open access under a Creative Commons Attribution 4.0 International License via link [springer.com](https://www.springer.com)

Reid Nichols, 2018-06-15 This book is intended as a conceptual roadmap to show how some of the numerous pieces of complex coastal systems intersect and might interact under changing future environmental regimes It is addressed to a non technical but environmentally literate audience that includes the lay public policy makers planners engineers and academics interested in the causes and consequences of global changes as they are likely to affect coastal systems The book also outlines some strategies for anticipating and responding to the challenges that

lie ahead The purpose is not to offer a technical treatise on how to build better numerical models or to provide the cognoscenti with new scientific details or theories Quite on the contrary the authors aim to provide a holistic easy accessible overview of coastal systems and therefore use a writing style that is non technical nonmathematical and non jargonized throughout Wherever scientific terms are required to avoid ambiguity a clear and simple definition is presented and those definitions are repeated in the glossary The authors aim to communicate with all who care about the future of coastal environments In Part 1 they present some underlying general big picture concepts that are applicable to coastal processes and coastal change worldwide Part 2 reviews some of the more important physical ecological and societal causes and outcomes of coastal change A selection of case studies of some prominent and highly vulnerable coastal regions is presented in Part 3 Some strategies for facilitating and supporting collaboration among the global scientific community to enhance future coastal resilience are outlined in Part 4
