

# INSTALLATION

## Step 2:

### Verify that the location is appropriate

Before installing your water heater, ensure that:

- 1 The water heater will be:
  - Installed indoors close to the center of the plumbing system.
  - In a suitable drain pan piped to an adequate floor drain or external to the building (Figure 6 on page 8).
  - In an area that will not freeze
  - In an area that is suitable for installing the water heater vertically
- 2 The location has adequate space (clearances) for periodic servicing.
- 3 The floor can support the weight of a full water heater.
- 4 Your area is not prone to earthquakes. If it is, use special straps as required by local building codes.

**NOTICE:** The state of California requires bracing, anchoring, or strapping the water heater to avoid its moving during an earthquake. Contact local utilities for code requirements in your area, visit <http://www.dsa.dgs.ca.gov>, or call 1-916-445-8100 and request instructions. Other locations may have similar requirements. Check with your local and state authorities.

5

The location is not prone to physical damage by vehicles, flooding, or other risks.

Figure 8 - In a garage, install a vehicle stop to avoid water heater damage.

6

Avoid locations such as attics, upper floors, or where a leak might damage the structure or furnishings. Due to the normal corrosive action of water, the tank will eventually leak. To minimize property damage from leaks, inspect and maintain your water heater in accordance with this manual's instructions. Install a suitable drain pan under the water heater piped to an adequate drain. Inspect the drain pan, pipes, and surrounding area regularly and fix any leaks found. Drain pans are available at your local plumbing supplier. Leaks are frequently in the plumbing system itself and not the water heater.

## Step 3:

### Removing the old water heater

1

Read each installation step and decide if you have the necessary skills to install the water heater. Only proceed if you can safely perform the work. If you are not comfortable, have a qualified person perform the installation.

2

Locate the water heater's circuit breaker and turn it OFF (or remove the circuit's fuses).

3

On the old water heater, remove the electrical junction box access panel.

Using a non-contact circuit tester, check the wiring to make certain the power is OFF.

**⚠ WARNING!** Working on an energized circuit can result in severe injury or death from electrical shock.

4

Disconnect the electrical wires.

5

Open a hot water faucet and let the hot water run until it is cool (This may take 10 minutes or longer).

Figure 9 - Let the hot water run until it is cool.

**⚠ WARNING!** Be sure the water runs cool before draining the tank to reduce the risk of scalding.

6

Connect a garden hose to the drain valve and place the other end of the hose in a drain, outside, or a bucket. (Note that sediment in the bottom of the tank may clog the valve and prevent it from draining. If you can't get the tank to drain, contact a qualified person.)
