Gluon plasma and heavy ion collisions follows the previous ones published in 1988 and 2005 that described theoretical proposals for a large program and then the QGP discovery at RHIC The present one describes the rather mature field with extensive program at RHIC and LHC colliders and corresponding theory QGP turns out to be a strongly coupled medium made up of quarks and gluons existing in exploding fireballs It is the hottest form of matter created in a laboratory Other subjects discussed in the book are QCD vacuum structure including topological solitons and nonperturbative phenomena It also includes some recent progress in theory of hadrons bridging hadronic spectroscopy with partonic observables

Frontiers of Optical Spectroscopy Baldassare Di Bartolo,Ottavio Forte,2005-02-17 Advanced spectroscopic techniques allow the probing of very small systems and very fast phenomena conditions that can be considered extreme at the present status of our experimentation and knowledge Quantum dots nanocrystals and single molecules are examples of the former and events on the femtosecond scale examples of the latter The purpose of this book is to examine the realm of phenomena of such extreme type and the techniques that permit their investigations Each author has developed a coherent section of the

program starting at a somewhat fundamental level and ultimately reaching the frontier of knowledge in the field in a systematic and didactic fashion The formal lectures are complemented by additional seminars *Heavy Ion Collisions* Paul Bonche, Maurice Lévy, Philippe Quentin, Dominique Vautherin, 2013-03-08 The 1984 Cargese Advanced Study Institute was devoted to the study of nuclear heavy ion collisions at medium and ultrarelativistic energies The origin of this meeting goes back to 1982 when the organizers met at the GANIL laboratory in Caen France which had just started accelerating argon ions at 44 MeV per nucleon We then realized that 1984 should be the appropriate time to review the first results obtained with such new kinds of facilities The material contained in this volume presenting many beautiful results on nuclei at high excitation fully confirms this point Many stimulating exchanges between experts in rather different fields already took place during the school and we hope that this cross fertilization will lead to further developments About half of the present volume is also devoted to the field of relativistic heavy ion collisions which is now expanding rapidly As an illustration let us recall that the construction of a 30 on 30 GeV per nucleon collider at Brookhaven has been recognized last year as one of the major priorities by the US Nuclear Science Advisory Committee We would like to express our gratitude to NATO for its generous financial support which made this institute possible We also wish to thank the Institut de Physique Nucleaire et de Physique des Particules France the Commissariat à l'énergie atomique France and The National Science Foundation USA for the attribution of travel grants
