Long-run behavior of interval neutrosophic Markov chain D. Nagarajan, M. Lathamaheswari, Said Broumi, J. Kavikumar, Florentin Smarandache, As the world is a competitive one prediction of the future trend is an important task for the survival of any organization There are many statistical and technical methods available for doing this task and this can be done in an optimized way using Markov chain with time series where random changes are allowed Markov chains are an essential technique in random process underlying the Markov property 1 Longrun behavior is the behavior of the system where each and every input can be different and the free entry is unconditional In addition the cost of this behavior is the minimum of short run behavior

Predictive Econometrics and Big Data Vladik Kreinovich, Songsak Sriboonchitta, Nopasit Chakpitak, 2017-11-30 This book presents recent research on predictive econometrics and big data Gathering edited papers presented at the 11th International Conference of the Thailand Econometric Society TES2018 held in Chiang Mai Thailand on January 10 12 2018 its main focus is on predictive techniques which directly aim at predicting economic phenomena and big data techniques which enable us to handle the enormous amounts of data generated by modern computers in a reasonable time The book also discusses the applications of more traditional statistical techniques to econometric problems Econometrics is a branch of economics that employs mathematical especially statistical methods to analyze economic systems to forecast economic and financial dynamics and to develop strategies for achieving desirable economic performance It is therefore important to develop data processing techniques that explicitly focus on prediction The more data we have the better our predictions will be As such these techniques are essential to our ability to process huge amounts of available data
