Maths Socr 24 May 2013:

Life by Algorithms Catherine Besteman, Hugh Gusterson, 2019-05-23 Computerized processes are everywhere in our society. They are the automated phone messaging systems that businesses use to screen calls; the link between student standardized test scores and public schools' access to resources; the algorithms that regulate patient diagnoses and reimbursements to doctors. The storage, sorting, and analysis of massive amounts of information have enabled the automation of decision making at an unprecedented level. Meanwhile, computers have offered a model of cognition that increasingly shapes our approach to the world. The proliferation of robo-processes is the result. As editors Catherine Besteman and Hugh Gusterson observe in this rich and wide-ranging volume, which features contributions from a distinguished cast of scholars in anthropology, communications, international studies, and political science, although automatic processes are designed to be engines of rational systems, the stories in *Life by Algorithms* reveal how they can in fact produce absurd, inflexible, or even dangerous outcomes. Joining the call for algorithmic transparency, the contributors bring exceptional sensitivity to everyday sociality into their critique to better understand how the perils of modern technology affect finance, medicine, education, housing, the workplace, food production, public space, and emotions, not as separate problems but as linked manifestations of a deeper defect in the fundamental ordering of our society. Contributors: Catherine Besteman, Alex Blanchette, Robert W. Gehl, Hugh Gusterson, Catherine Lutz, Ann Lutz Fernandez, Joseph Masco, Sally Engle Merry, Keesha M. Middlemass, Noelle Stout, Susan J. Terrio.

ICMLG2016-4th International Conference on Management, Leadership and Governance Dmitry Vasilenko and Natalia Khazieva, *Responsibilities of the Non-State Actor in Armed Conflict and the Market Place* Noemi Gal-Or, Cedric Ryngaert, Math Noortmann, 2015-05-12 The central question of this pioneer work on the responsibility of non-state actors (NSAs) and the consequences thereof is: To whom are such actors in particular armed opposition groups and business corporations accountable for their actions in armed conflict and in peace times? Does responsibility in international law apply to these NSAs qua groups? While much has been written about NSAs' rights and participation in the global theatre, as well as the responsibility of the state and international organisations for wrongful acts by NSAs, scant attention has been paid to questions of NSA organizational responsibility in spite of their potential to wreak international havoc. This volume offers innovative insights into this unexplored territory by analyzing responsibility questions from both theoretical and empirical perspectives. *Journal of the Senate of the United States of America* United States Congress, Senate,

Yearbook of International Organizations 2014-2015, Volumes 1a & 1b (Set) Union of International Associations, 2014-06-16 Volume 1 A and B covers international organizations throughout the world, comprising their aims, activities, and events. **E-Participation in Smart Cities: Technologies and Models of Governance for Citizen Engagement** Manuel Pedro Rodríguez Bolívar, Laura Alcaide Muñoz, 2018-08-01 This book analyzes e-participation in smart cities. In recent decades, information and communication technologies (ICT) have played a key role in the democratic political and governance

process by allowing easier interaction between governments and citizens and the increased ability of citizens to participate in the production chain of public services E participation plays an important role in the development of smart cities and smart communities but it has not yet been extensively studied This book fills that gap by combining empirical and theoretical research to analyze actual practices of citizen involvement in smart cities and build a solid framework for successful e participation in smart cities The book is divided into three parts Part I discusses smart technologies and their role in improving e participation in smart cities Part II deals with models of e participation in smart cities and the organization issues affecting the implementation of e participation these chapters analyze the efficiency of governance models in relation to the establishment of smart cities Part III proposes incentives to motivate increased participation by governments and citizenry within the smart cities context Written by an international panel of experts and practitioners this book will be a convenient source of information on e participation in smart cities and will be valuable to academics researchers policy makers public managers citizens international organizations and anyone who has a stake in enhancing citizen engagement in smart cities
