

Using Simulink® and Stateflow™ in Automotive Applications

Abstract

This book includes nine examples that represent typical design tasks of an automotive engineer. It shows how The MathWorks modeling and simulation tools, Simulink® and Stateflow™ facilitate the design of automotive control systems. Each example explains the principles of the physical situation, and presents the equations that represent the system. The examples show how to proceed from the physical equations to the Simulink block diagram. Once the Simulink model has been completed, we run the simulation, analyze the results, and draw conclusions from the study.

Advanced Microsystems for Automotive Applications 2003 Jürgen Valldorf, Wolfgang Gessner, 2007-12-22

Microsystems are an important factor that contribute to an automobile model's success. To meet the customer's desire for safety, convenience, and vehicle economy and to satisfy environmental standards, microsystems are the critical factor. Microsystems applications (MST) have already resulted in improved performance and better value for money. But the advances implemented reveal only the beginning of a revolution in the vehicle sector which aims at a complete transition from the mechanically driven automobile system to a mechanically based but ICT driven system. The selected contributions from AMAA 2003 treat safety, both preventive and protective, powertrain, online measurement and control of engine and transmission subsystems, comfort, and HMI systems to enhance the comfort of passengers and human-machine interface issues, and networked vehicle. All aspects of intra-car systems and ambient communication networks. Selected proceedings for the seventh conference on microsystems in the automotive sector, a regular event now with an increasing number of participants on a modern and promising field taking place in Berlin in May 2003.

Modeling and Simulation with Simulink® Dingyü Xue, 2022-03-07. The essential intermediate and advanced topics of Simulink are covered in the book. The concept of multi-domain physical modeling concept and tools in Simulink are illustrated with examples for engineering systems and multimedia information. The combination of Simulink and numerical optimization methods provides new approaches for solving problems where solutions are not known otherwise.

Automotive Electronics Reliability Ronald K. Jürgen, 2010-08-10. Vehicle reliability problems continue to be the news because of major vehicle recalls from several manufacturers. This book includes 40 SAE technical papers published from 2007 through 2010 that describe the latest research on automotive electronics reliability technology. This book will help engineers and researchers focus on the design strategies being used to minimize electronics reliability problems and how to test and verify those strategies. After an overview of durability risk assessment and failure mechanisms, this book focuses on state-of-the-art techniques for reliability-based design and reliability testing and verification. Topics include powertrain control, monitoring, distributed automotive embedded systems, model-based design, x-by-wire systems, battery durability, design verification, fault tree analysis. The book also includes editor Ronald K. Jürgen's introduction, Striving for Maximum Reliability in a Highly Complex Electronic Environment, and a concluding section on the future of electronics reliability, including networking technology, domain control units, the use of AUTOSAR, and embedded software.

Advanced Microsystems for Automotive Applications 2004 Jürgen Valldorf, Wolfgang Gessner, 2007-12-22. Microsystems applications (MST) in automobiles have become commonplace; they enable the introduction of a series of new functions and at the same time the replacement of existing technologies, offering improved performance and better value for money. Microsystems are indispensable for fulfilling a complete transition from the mechanically driven automobile system to a mechanically based but ICT driven system as part of a likewise complex

environment With the introduction of micro systems a series of challenges arise regarding complexity systems design reliability serviceability etc These challenges have to be addressed in order to meet high customer expectations concerning performance and price
