BIM models of buildings are deep reservoirs of information that can provide valuable spatial and mechanical details on every aspect of a property. When used appropriately, this data can improve performance and save time, effort, and money in running and maintaining the building during its life cycle. It can also provide information for future modifications. For instance, a BIM could reveal everything from the manufacturer of a light fixture to its energy usage to maintenance instructions. BIM for Facility Managers explains how BIM can be linked to facility management FM systems to achieve very significant life cycle advantages. It presents guidelines for using BIM in FM that have been developed by public and private owners such as the GSA. There is an extensive discussion of the legal and contractual issues involved in BIM FM integration. It describes how COBie can be used to name capture and communicate FM related data to downstream systems. There is also extensive discussion of commercial software tools that can be used to facilitate this integration. This book features six in depth case studies that illustrate how BIM has been successfully integrated with facility management in real life projects at Texas A M Health Science Center, USC School of Cinematic Arts, MathWorks new campus, Xavier University, State of Wisconsin Facilities, University of Chicago Library renovation. BIM for Facility Managers is an indispensable resource for facility managers, building owners, and developers alike.

Subject Guide to Books in Print, 1997 *Innovation for inclusive value-chain development* Devaux, André, Torero, Maximo, Donovan, Jason, Horton, Douglas E., 2016-10-21 Governments, nongovernmental organizations, donors, and the private sector have increasingly embraced value chain development (VCD) for stimulating economic growth and combating rural poverty. *Innovation for Inclusive Value Chain Development: Successes and Challenges* helps to fill the current gap in systematic knowledge about how well VCD has performed, related trade offs or undesired effects, and which combinations of VCD elements are most likely to reduce poverty and deliver on overall development goals. This book uses case studies to examine a range of VCD experiences. Approaching the subject from various angles, it looks at new linkages to markets and the role of farmer organizations and contract farming in raising productivity and access to markets, the minimum assets requirement to participate in VCD, the role of multi stakeholder platforms in VCD, and how to measure and identify successful VCD interventions. The book also explores the challenges livestock dependent people face, how urbanization and advancing technologies affect linkages, ways to increase gender inclusion and economic growth, and the different roles various types of platforms play in VCD. **Official Export Guide** North American Publishing Company, 1990

Water and Wastewater Pipeline Assessment Technologies Justin Starr, 2021-05-31 Water and wastewater infrastructure are a somewhat invisible yet critical part of modern life. Incredibly many buried assets have been in service for 50-100 years and are still in good condition. Conversely, other systems fail well before their predicted design lives, causing property damage, injury, and even loss of life. In many cases, early detection could have prevented catastrophic failure, and understanding the state of underground infrastructure has become a key priority for many municipalities. Industry has responded with a number of new and innovative technologies for condition assessment; however, understanding these tools can be difficult as many

vendors treat their proprietary systems as trade secrets

Water and Wastewater Pipeline Assessment Technologies Classification Systems Sensors and Results Interpretation provides a thorough guide to the technical workings of some of the most popular water and wastewater assessment technologies available including CCTV crawlers acoustic listening devices laser sensors 360 video cameras pipe penetrating radar and more Features Presents an overview of current technologies in CCTV inspection including next generation video formats high definition resolution and fisheye sidescan technology Provides helpful tips and tricks to cut through technical jargon and identify the technological specifications to compare between multiple vendors Examines the pros and cons of competing technologies including laser and lidar and provides an overview of unique approaches such as Pipe Penetrating Radar Focused Electrode Leak Location and more Highlights the importance of coding standards data management and software tools that can be leveraged to create a successful asset management program
