Confronting Hunger in the USA Adam M. Pine,2016-07-01 Food insecurity in the US is a critical issue that is experienced by approximately 15% of the population each year Hunger is not caused by an inability to produce enough food for the population but is instead a manifestation of federal agricultural policies that support the overproduction of commodity crops and neoliberal social policies that seek to lower the amount of benefits dispersed to those in need This book focuses on how four different food based community programs address both the physical sensation of hunger as well as the political and economic disempowerment that work against the ability of people experiencing food insecurity to mobilize as a political force Confronting Hunger in the USA argues that most food programs do more to create community among their volunteers than among program participants and tend to reinforce neoliberal understandings of citizenship Community food programs reach out to the most vulnerable members of society in caring and gentle ways and often use the language of alternative economies to articulate a different relationship between the individual and the state However the projects in this study act as individual pieces of the state s insufficient social safety net and are only beginning to articulate a new relationship between food and society

Handbook for the Analysis of Micro-Particles in Archaeological Samples Amanda G. Henry,2020-07-07 This handbook provides a resource for those already familiar with some kinds of micro particles who wish to learn more about others or for those just starting out in the study of microremains who wish to have a broad understanding about microscopic archaeology Topics covered in this handbook include diatom microfossils starch granules pollen grains phytoliths natural fibers volcanic glass minerals insect remains and feathers Archaeological investigations increasingly rely on specialist identification of microscopic remnants found in sites These micro particles can provide information about the site environment and human activities that may not be apparent from artifacts and materials preserved on the macro scale and have given us new and often high profile information about our past The investigation of this invisible archaeology that is

invisible to the naked eye is still somewhat new and generally each kind of micro particle is studied individually Researchers become experts in a narrow range of micro particle types but may be less familiar with or even completely unaware of the multitude of other forms that are frequently encountered in archaeological samples This handbook s accessible approach is suitable for those at the beginner level **Sound and Music Computing** Tapio Lokki,Stefania Serafin,Meinard Müller,Vesa Välimäki,2018-06-26 This book is a printed edition of the Special Issue Sound and Music Computing that was published in Applied Sciences
