The Assessment, Evaluation and Rehabilitation of Everyday Memory Problems Barbara A. Wilson, 2013-11-07 In the World Library of Psychologists series international experts present career long collections of what they judge to be their finest work extracts from books key articles salient research findings and their major theoretical and practical contributions This volume of self selected papers recognises Professor Barbara A Wilson s major contribution to the study of neuropsychology Published over a 25 year period the papers included here address the assessment treatment and evaluation of rehabilitation provided to people who have memory difficulties arising from an injury or illness affecting the brain This selection of papers includes work on errorless learning the natural history of the development of compensatory memory systems paging systems developed to enhance independent daily living for memory impaired people and single case experimental designs to appraise the response of individual patients The final section includes a practical framework for understanding compensatory behaviour a model of cognitive rehabilitation and a discussion of the dilemmas created by the different aims of neuroscience as opposed to those of clinicians This book will be of great interest to clinical psychologists neuropsychologists occupational therapists and speech and language therapists along with anyone who is interested in reducing the impact of memory problems on people who have suffered brain injury

The Cognitive Neuroscience of Visual Working Memory Natasha Sigala, Zsuzsa Kaldy, 2017-06-02 Visual working memory allows us to temporarily maintain and manipulate visual information in order to solve a task The study of the brain mechanisms underlying this function began more than a half century ago with Scoville and Milner s 1957 seminal discoveries with amnesic patients This timely collection of papers brings together diverse perspectives on the cognitive neuroscience of visual working memory from multiple fields that have traditionally been fairly disjointed human neuroimaging electrophysiological behavioural and animal lesion studies investigating both the developing and the adult brain

Handbook of Episodic Memory Ekrem Dere, Alexander Easton, Lynn Nadel, Joseph P Huston, 2008-09-04 Episodic memory is the name of the kind of memory that records personal experiences instead of the mere remembering of impersonal facts and rules This type of memory is extremely sensitive to ageing and disease so an understanding of the mechanisms of episodic memory might lead to the development of therapies suited to improve memory in some patient populations Episodic memory is unique in that it includes an aspect of self awareness and helps us to remember who we are in terms of what we did and what we have been passed through and what we should do in the future This book brings together a renowned team of contributors from the fields of cognitive psychology neuropsychology and behavioural and molecular neuroscience It provides a detailed and comprehensive overview of recent developments in understanding human episodic memory and animal episodic like memory in terms of concepts methods mechanisms neurobiology and pathology The work presented within this book will have a profound effect on the direction that future research in this topic will take The first and most current comprehensive

updated with new research in order to improve the clinical practice of neuropsychological testing the psychometric characteristics of new neuropsychological tests and the theories behind the testing in a circular way In this research topic we want to report recent advances and changes from old standard diagnostic testing to more recent procedures and methods in the area of cognitive testing Applications comparisons novel definitions and measures updated procedures and psychometric properties of existing instruments measurement invariance reliability repeatability specific norms particular applications and use in specific patients are all welcome Open access tests methods and procedures are encouraged together with studies that follow the Open Science initiative This topic joins two different backgrounds in this area of research psychometrics and neuropsychology and all studies in these areas will be considered included reviews and meta analyses Year Book Carnegie Institution of Washington,1920 List of the names of persons engaged in the various activities v 10 p 243 257

Neuropharmacological, Neurobiological and Behavioral Mechanisms of Learning and Memory Alfredo Meneses,Antonella Gasbarri,Assunta Pompili,2019-06-28 Among the more dynamic topics in science are Neuropharmacological Neurobiological and Behavioral Mechanisms of Learning and Memory In this eBook the reader will find fresh reviews and research papers illustrating diverse approaches which will be seminal in the future **Human Associative Memory** John R. Anderson,G. H. Bower,2014-02-25 First published in 1973 This book proposes and tests a theory about human memory about how a person encodes retains and retrieves information from memory The book is especially concerned with memory for sentential materials We propose a theoretical framework which is adequate for describing comprehension of linguistic materials for exhibiting the internal representation of propositional materials for characterizing the interpretative processes which encode this information into memory and make use of it for remembering for answering questions recognizing instances of known categories drawing inferences and making deductions The long and short of mental time travel-- self-projection over time-scales large and small James M. Broadway,Claire M. Zedelius,Jonathan W. Schooler,Simon Grondin,2015-07-02 Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days months years and beyond This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales Dealing with conceptual time mental time travel also called mental simulation self projection episodic semantic memory prospection foresight allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge Moreover contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so called present moment of perception action cycle time This Research

Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa no less progress and integrative synthesis within and across scientific domains might be facilitated Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus like feedforward feedback system for goal pursuit As an example it is notable that the duality of prospection and semantic episodic memory operating at conceptual time scales has an analogue in perception action cycle time namely the interplay of anticipatory attention and working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format accepted by the journal Original Research Methods Hypothesis Theory Reviews etc which might speak to questions about time and temporal phenomena at long and or short time scales

Animal Memory Werner K. Honig,P. H. R. James,2013-10-22 Animal Memory is based on the proceedings of a symposium held at Dalhousie University in the summer of 1969 Each of the seven chapters provide broad coverage of the topic with which it is concerned and the experimental work reported is representative of the most significant developments in the field The book includes two studies on associative memory the memory of one event which is essential to its association over a delay with subsequent events One study shows that animals can remember events from one learning trial to the next and that their behavior will be determined largely by the sequences of trials with differing outcomes the other presents research on the association of flavors with toxicosis in a conditioning paradigm Separate chapters deal with retentive memory the retention and forgetting of learned behavior over time and the physiological basis of memory in terms of consolidation theory These studies demonstrate that animals do forget and examine theories of forgetting The final chapter provides a critical discussion based on all of the foregoing material in which the topics covered in the book are related to current work on human retention and forgetting
