Mendel's Dwarf Simon Mawer, 2012-12-11 Like his great great great uncle geneticist Gregor Mendel Dr Benedict Lambert struggles to unlock the secrets of heredity and genetic determinism However Benedict's mission is particularly urgent and particularly personal for he was born with achondroplasia he's a dwarf He's also a man desperate for love and acceptance and when he finds both in Jean a shy librarian he stumbles upon an opportunity to correct the injustice of his own at least to him unlucky genes Entertaining and tender this witty and surprisingly erotic novel reveals the beauty and drama of scientific inquiry as it informs us of the simple passions against which even the most brilliant mind is rendered powerless

punched version **The Biologist's Imagination** William Hoffman, Leo Furcht, 2014-05-01 Scholars and policymakers alike agree that innovation in the biosciences is key to future growth. The field continues to shift and expand and it is certainly changing the way people live their lives in a variety of ways. With a large share of federal research dollars devoted to the biosciences, the field is just beginning to live up to its billing as a source of innovation, economic productivity and growth. Vast untapped potential to imagine and innovate exists in the biosciences given new tools now widely available. In *The Biologist's Imagination*, William Hoffman and Leo Furcht examine the history of innovation in the biosciences, tracing technological innovation from the late eighteenth century to the present and placing special emphasis on how and where technology evolves. Place is often key to innovation from the early industrial age to the rise of the biotechnology industry in the second half of the twentieth century. The book uses the distinct history of bioinnovation to discuss current trends as they relate to medicine, agriculture, energy, industry, ecosystems and climate. Fast moving research fields like genomics, synthetic biology, stem cell research, neuroscience, bioautomation and bioprinting are accelerating these trends. Hoffman and Furcht argue that our system of bioscience innovation is itself in need of innovation. It needs to adapt to the massive changes brought about by converging technologies and the globalization of higher education, workforce skills and entrepreneurship. *The Biologist's Imagination* is both a review of past models for bioscience innovation and a forward looking original argument for what future models should take into account.

Standing on the Shoulders of Darwin and Mendel David J. Galton, 2017-10-30 *Standing on the Shoulders of Darwin and Mendel: Early Views of Inheritance* explores early theories about the mechanisms of inheritance. Beginning with Charles Darwin's now rejected pangenesis hypothesis, the book documents the reception of Gregor Mendel's work on peas and follows the work of early 20th century scholars. The research of Francis Galton, a cousin of Darwin and the friction it caused between these two, are a part of a longer story of the development of genetics and an understanding of how offspring inherit the characteristics of their parents. Bateson, Garrod, de Vries, Tschermak and others are all characters in a scientific story of discovery, acrimony, cooperation and revelation.

Of Spaces and Ideas Petr Chalupský, Tereza Topolovská, 2024-11-01 This monograph provides a deeper insight into the work of two contemporary British novelists, Jim Crace and Simon Mawer, with a particular emphasis on their spatial sensibility as one of the defining elements of their poetics. Drawing on a range of literary theoretical approaches to space, the study analyses selected novels by the two writers to demonstrate the ways in which they render space and place and above all the ways in which their spatial representations allow them to express the key ideas behind their stories, namely those of identity, history and the relationship between an individual and the environment in which they live.
