Human Factors and Ergonomics researchers and practitioners involved with systems engineering and automotive academics

In this book Prof Stanton and colleagues show how Human Factors methods can be applied to the tricky problem of interfacing human drivers with vehicle automation. They have developed an approach to designing the human automation interaction for the handovers between the driver and the vehicle. This approach has been tested in driving simulators and most interestingly in real vehicles on British motorways. The approach called User Centred Ecological Interface Design has been validated against driver behaviour and used to support their ongoing work on vehicle automation. I highly recommend this book for anyone interested or involved in designing human automation interaction in vehicles and beyond. Professor
