A. Eiselt,Carl-Louis Sandblom,2004-01-12 The purpose of this book is to provide readers with an introduction to the fields of decision making location analysis and project and machine scheduling The combination of these topics is not an accident decision analysis can be used to investigate decision seenarios in general location analysis is one of the prime examples of decision making on the strategic level project scheduling is typically concerned with decision making on the tactical level and machine scheduling deals with decision

making on the operational level Some of the chapters were originally contributed by different authors and we have made every attempt to unify the notation style and most importantly the level of the exposition Similar to our book on Integer Programming and Network Models Eiselt and Sandblom 2000 the emphasis of this volume is on models rather than solution methods This is particularly important in a book that purports to promote the science of decision making As such advanced undergraduate and graduate students as well as practitioners will find this volume beneficial While different authors prefer different degrees of mathematical sophistication we have made every possible attempt to unify the approaches provide clear explanations and make this volume accessible to as many readers as possible

Production and Operations Analytics Steven Nahmias, Tava Lennon Olsen, 2020-10-01 Nahmias and Olsen skillfully blend comprehensive coverage of topics with careful integration of mathematics The authors' decades of experience in the field contributed to the success of previous editions the eighth edition continues the long tradition of excellence Clearly written reasonably priced with an abundance of expertly formulated practice problems and updated examples this

textbook is essential reading for analyzing and improving all facets of operations. Some of the material in the newest edition has been reorganized. For example, the first chapter introduces service strategy, the product-process matrix, and flexible manufacturing systems; benchmarking the productivity frontier; the innovation curve; and lean production as a strategy. The focus is slightly more international. The analysis of capacity growth planning now appears in the chapter on supply chain analytics. Aggregate planning details were added to chapter 3, including chase and level strategies in an appendix to the chapter. There is an expanded discussion on risk pooling in the chapter on supply chain strategy. The mechanics behind lean production are included in the chapter on push and pull production systems. The chapter on quality and assurance downplays sampling in favor of discussions of quality management, process capability, and the waste elimination side of lean. The separate chapter on facilities layout and location was eliminated, and the information redistributed throughout the text. The authors reinforce the learning process through key points at the beginning of each chapter to guide the reader, snapshots that provide useful examples of applications to businesses, and historical notes that provide a context for the topics discussed.

Content moderation in the age of AI has become a complex aspect of managing online spaces. As digital platforms grow and the volume of user-generated content expands exponentially, traditional methods of human moderation are no longer sufficient. Artificial intelligence technologies, including machine learning and natural language processing, have emerged as powerful tools to help platforms quickly and efficiently detect and remove harmful or inappropriate content, such as hate speech, misinformation, and graphic material.

However these AI systems come with challenges including issues of bias lack of context understanding and the difficulty of moderating nuanced or subjective content Striking a balance between automation and human oversight is essential to ensure content moderation remains effective fair and transparent As AI evolves the responsibility of creating ethical accountable moderation systems falls on both tech companies and policymakers ensuring that AI powered moderation can foster a safe and inclusive online environment Content Moderation in the Age of AI examines the strategies and tools that businesses can use to ensure AI generated content is moderated according to ethical legal and social standards It explores potential risks associated with unmoderated AI output such as copyright issues misinformation harmful content deepfakes and biased material and explores ways in which policymakers businesses and academia can mitigate these dangers This book covers topics such as misinformation psychology and social media and is a useful resource for sociologists psychologists engineers business owners academicians researchers and data scientists [National Library of Medicine Audiovisuals Catalog](#)
