Foundations Of Jini 2 Programming:

Foundations of Jini 2 Programming Jan Newmarch, 2007-02-01 Here is a comprehensive reference for Java programmers interested in learning and applying Jini toward their respective network applications any Java enabled device interoperable with any other Java enabled device Jini is Sun's Java based technology with potential to make transparent universal plug and play a reality This book is an expanded updated version of the most popular online tutorial for Jini Author Jan Newmarch includes comprehensive Jini advancements and other important topics like how Enterprise JavaBeans blend in with the Jini framework and how CORBA fits in as well The book is based on Jini 2.0 *Improving Complex Systems Today* Daniel D. Frey, Shuichi Fukuda, Georg Rock, 2011-07-09 As the main theme of *Improving Complex Systems Today* implies this book is intended to provide readers with a new perspective on concurrent engineering from the standpoint of systems engineering It can serve as a versatile tool to help readers to navigate the ever changing state of this particular field The primary focus of concurrent engineering was at first on bringing downstream information as far upstream as possible by introducing parallel processing in order to reduce time to market and to prevent errors at a later stage which would sometimes cause irrevocable damage Up to now numerous new concepts methodologies and tools have been developed but over concurrent engineering's 20 year history the situation has changed extensively Now industry has to work in the global marketplace and to cope with diversifying requirements and increasing complexities Such globalization and diversification necessitate collaboration across different fields and across national boundaries Thus the new concurrent engineering calls for a systems approach to gain global market competitiveness *Improving Complex Systems Today* provides a new insight into concurrent engineering today *Software and Data Technologies* Joaquim Filipe, Boris Shishkov, Markus Helfert, 2008-07-18 This book contains the best papers of the First International Conference on Software and Data Technologies ICSOFT 2006 organized by the Institute for Systems and Technologies of Information Communication and Control INSTICC in cooperation with the Object Management Group OMG Hosted by the School of Business of the Polytechnic Institute of Setubal the conference was sponsored by Enterprise Ireland and the Polytechnic Institute of Setubal The purpose of ICSOFT 2006 was to bring together researchers and practitioners interested in information technology and software development The conference tracks were Software Engineering Information Systems and Data Management Programming Languages Distributed and Parallel Systems and Knowledge Engineering Being crucial for the development of information systems software and data technologies encompass a large number of research topics and applications from implementation related issues to more abstract theoretical aspects of software engineering from databases and data warehouses to management information systems and knowledge base systems next to that distributed systems pervasive computing data quality and other related topics are included in the scope of this conference ICSOFT included in its program a panel to discuss the future of software development composed by six distinguished world class researchers Furthermore the conference program was enriched by a tutorial and six

keynote lectures ICSoft 2006 received 187 paper submissions from 39 countries in all continents

Concurrent Engineering in the 21st Century Josip Stjepandić, Nel Wognum, Wim J.C. Verhagen, 2015-01-30 Presenting the gradual evolution of the concept of Concurrent Engineering CE and the technical social methods and tools that have been developed including the many theoretical and practical challenges that still exist this book serves to summarize the achievements and current challenges of CE and will give readers a comprehensive picture of CE as researched and practiced in different regions of the world Featuring in depth analysis of complex real life applications and experiences this book demonstrates that Concurrent Engineering is used widely in many industries and that the same basic engineering principles can also be applied to new emerging fields like sustainable mobility Designed to serve as a valuable reference to industry experts managers students researchers and software developers this book is intended to serve as both an introduction to development and as an analysis of the novel approaches and techniques of CE as well as being a compact reference for more experienced readers

Data Acquisition Michele Vadursi, 2010-11-28 The book is intended to be a collection of contributions providing a bird's eye view of some relevant multidisciplinary applications of data acquisition While assuming that the reader is familiar with the basics of sampling theory and analog to digital conversion the attention is focused on applied research and industrial applications of data acquisition Even in the few cases when theoretical issues are investigated the goal is making the theory comprehensible to a wide application oriented audience

The Landscape of Pervasive Computing Standards Sumi Helal, 2022-05-31 This lecture presents a first compendium of established and emerging standards in pervasive computing systems The lecture explains the role of each of the covered standards and explains the relationship and interplay among them Hopefully the lecture will help piece together the various standards into a sensible and clear landscape The lecture is a digest reorganization and a compilation of several short articles that have been published in the Standards and Emerging Technologies department of the IEEE Pervasive Computing magazine The articles have been edited and shortened or expanded to provide the necessary focus and uniform coverage depth There are more standards and common practices in pervasive systems than the lecture could cover However systems perspective and programmability of pervasive spaces which are the main foci of the lecture set the scope and determined which standards should be included The lecture explains what it means to program a pervasive space and introduces the new requirements brought about by pervasive computing Among the standards the lecture covers are sensors and device standards service oriented device standards service discovery and delivery standards service gateway standards and standards for universal interactions with pervasive spaces In addition the emerging sensor platform and domestic robots technologies are covered and their essential new roles explained The lecture also briefly covers a set of standards that represents an ecosystem for the emerging pervasive healthcare industry Audiences who may benefit from this lecture include

- 1 academic and industrial researchers working on sensor based pervasive or ubiquitous computing
- 2 system integrator consultants and firms especially those concerned with integrating sensors actuators and devices to their enterprise and business systems
- 3 device smart chips and sensor manufacturers
- 4 government agencies
- 5 the healthcare IT and pervasive health industries and
- 6 other industries such as logistics manufacturing and the emerging smart grid and environment sustainability industries

From P2P and Grids to Services on the Web Ian J. Taylor, Andrew Harrison, 2008-12-11 Covers a comprehensive range of P2P and Grid technologies Provides a broad overview of the P2P field and how it relates to other technologies such as Grid Computing jini Agent based computing and web services Proceedings of the European Computing Conference Nikos Mastorakis, Valeri Mladenov, Vassiliki T. Kontargyri, 2010-03-25 Software testing has been considered so important that organizations can assign teams only for testing activities Testing is an important activity to ensure software quality Tests are usually run several times to certify that code maintenance did not accidentally insert defects into working parts of the software In such situations test teams shall be able to estimate the required effort to execute test cases in its schedules and to request more resources or negotiate deadlines when necessary When regarding model based testing approaches that we use in our documented Integrated and Optimized Software Testing methodology IOSTP 1.4 a high number of test cases can be automatically generated As team resources are limited it may be not practical to execute all generated test cases Their complexity usually determines the effort required to execute them and it can be used for planning test resources and test suites Several software development estimation models have been proposed over the years However these models do not estimate the effort for executing a given test suite since their estimations are based on software development complexity instead of its test planning test case design and test execution complexity According to our reading of the literature e.g. 5.14 best practices in model based effort estimation include Local calibration or LC i.e. using local data to set two special tuning parameters Stratification i.e. given a database of past projects and a current project to be estimated restrict local calibration to just those records from similar projects *Core Web3D* Aaron E. Alencar, 2004-02-24 Advances in networking technology have revitalized the investigation of agent technology as a promising paradigm for engineering complex distributed software systems Agent technology has been applied to a wide range of application domains including e commerce human computer interfaces telecommunications

and software assistants Multi agent systems MASs and their underlying theories provide a more natural support for ensuring important properties such as autonomy mobility environment heterogeneity organization openness and intelligence As a consequence agent based systems are likely to provide new approaches to dealing with the complexity of developing and maintaining modern software However developing robust large scale agent based systems will require new software engineering approaches There are currently many methods and techniques for working with individual agents or with systems built using only a few agents Unfortunately agent based software engineering is still in its infancy and existing software engineering approaches are unable to cope with large MASs The complexity associated with a large MAS is considerable When a huge number of agents interact over heterogeneous environments various phenomena occur which are not as easy to capture as when only a few agents are working together As the multiple software agents are highly collaborative and operate in networked environments they have to be context aware and deal with environment uncertainty This makes their coordination and management more difficult and increases the likelihood of exceptional situations such as security holes privacy violations and unexpected global effects Moreover as users and software engineers delegate more autonomy to their MASs and put more trust in their results new concerns arise in real life applications

The Oxford Handbook of Business History Geoffrey Jones, Jonathan Zeitlin, 2008-01-25 This Handbook provides a state of the art survey of research in business history Business historians study the historical evolution of business systems entrepreneurs and firms as well as their interaction with their political economic and social environment They address issues of central concern to researchers in management studies and business administration as well as economics sociology and political science and to historians They employ a range of qualitative and quantitative methodologies but all share a belief in the importance of understanding change over time The Oxford Handbook of Business History has brought together leading scholars to provide a comprehensive critical and interdisciplinary examination of business history organized into four parts Approaches and Debates Forms of Business Organization Functions of Enterprise and Enterprise and Society The Handbook shows that

business history is a wide ranging and dynamic area of study generating compelling empirical data which has sometimes confirmed and sometimes contested widely held views in management and the social sciences The Oxford Handbook of Business History is a key reference work for scholars and advanced students of Business History and a fascinating resource for social scientists in general
