

Planes, Rivers, and Wind (pp. 4-6)

Students learn an about vectors and how to combine vectors. They observe vector addition and velocity composition in their everyday experiences between (or, the surrounding).

Example 1:

Three people are on different boats crossing a river. The boat in the middle is moving straight across the river, but the current is pushing it downstream. The boat in the foreground is moving straight across the river, but the current is pushing it downstream. The boat in the background is moving straight across the river, but the current is pushing it downstream.

Example 2:

Three different boats are crossing a river. The boat in the middle is moving straight across the river, but the current is pushing it downstream. The boat in the foreground is moving straight across the river, but the current is pushing it downstream. The boat in the background is moving straight across the river, but the current is pushing it downstream.

Example 3:

Three different boats are crossing a river. The boat in the middle is moving straight across the river, but the current is pushing it downstream. The boat in the foreground is moving straight across the river, but the current is pushing it downstream. The boat in the background is moving straight across the river, but the current is pushing it downstream.

Problem 1: If a boat is moving straight across a river, and the current is pushing it downstream, what is the boat's velocity relative to the shore?

Answer: $v_{\text{boat}} + v_{\text{current}} = v_{\text{result}}$

Three, v_{boat} and v_{current} are vectors, but the _____

and it is the vector addition that _____

Problem 2:

Three different boats are crossing a river. The boat in the middle is moving straight across the river, but the current is pushing it downstream. The boat in the foreground is moving straight across the river, but the current is pushing it downstream. The boat in the background is moving straight across the river, but the current is pushing it downstream.

Problem 3: In example 1, (above), suppose the boat in the middle is moving straight across the river, but the current is pushing it downstream. What is the boat's velocity relative to the shore?

Three different boats are crossing a river. The boat in the middle is moving straight across the river, but the current is pushing it downstream. The boat in the foreground is moving straight across the river, but the current is pushing it downstream. The boat in the background is moving straight across the river, but the current is pushing it downstream.
