100 Years of Gravity and Accelerated Frames Jong-Ping Hsu, Dana Fine, 2005 This collection of papers presents ideas and problems arising over the past 100 years regarding classical and quantum gravity gauge theories of gravity and spacetime transformations of accelerated frames Both Einstein's theory of gravity and the Yang Mills theory are gauge invariant The invariance principles in physics have transcended both kinetic and dynamic properties and are at the very heart of our understanding of the physical world In this spirit this book attempts to survey the development of various formulations for gravitational and Yang Mills fields and spacetime transformations of accelerated frames and to reveal their associated problems and limitations The aim is to present some of the leading ideas and problems discussed by physicists and mathematicians We highlight three aspects formulations of gravity as a Yang Mills field first discussed by Utiyama problems of gravitational theory discussed by Feynman Dyson and others spacetime properties and the physics of fields and particles in accelerated frames of reference These unfulfilled aspects of Einstein and Yang Mills profound thoughts present a great challenge to physicists and mathematicians in the 21st century Science and Ultimate Reality John D. Thornton, 1996 M-Theory and Quantum Geometry Lárus Thorlacius, Thordur Jonsson, 2012-12-06 The fundamental structure of matter and spacetime at the shortest length scales remains an exciting frontier of basic research in theoretical physics A unifying theme in this area is the quantization of geometrical objects The majority of lectures at the Advanced Study Institute on Quantum Geometry in Akureyri was on recent advances in superstring theory which is the leading candidate for a unified description of all known elementary particles and interactions The geometric concept of one dimensional extended objects or strings has always been at the core of superstring theory but in recent years the focus has shifted to include also higher dimensional objects so called D branes which play a key role in the non perturbative dynamics of the theory A related development has seen the strong coupling regime of a given string theory identified with the weak coupling regime of what was previously believed to be a different theory and a web of such dualities that interrelates all known superstring theories has emerged The resulting unified theoretical framework termed M theory has evolved at a rapid pace in recent years **World History II** United States Armed Forces Institute, 1964 **Gravitational Physics** National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Committee on Gravitational Physics, 1999-11-03 Gravitational Physics assesses the achievements of the field over the past decade in both theory and experiment identifies the most promising opportunities for research in the next decade and describes the resources necessary to realize those opportunities A major theme running through the opportunities is the exploration of strong gravitational fields such as those associated with black holes The book part of the ongoing decadal survey Physics in a New Era examines topics such as gravitational waves and their detection
