Modern Death Haider Warraich, 2017-02-07 There is no more universal truth in life than death. No matter who you are, it is certain that one day you will die, but the mechanics and understanding of that experience will differ greatly in today's modern age. Dr. Haider Warraich is a young and brilliant new voice in the conversation about death and dying, started by Dr. Sherwin Nuland and Atul Gawande. Dr. Warraich takes a broader look at how we die today, from the cellular level up to the very definition of death itself. The most basic aspects of dying—the whys, wheres, whens, and hows—are almost nothing like what they were mere decades ago. Beyond its ecology, epidemiology, and economics, the very ethos of death has changed. Modern Death, Dr. Warraich's debut book, will explore the rituals and language of dying that have developed in the last century and how modern technology has not only changed the whens and wheres of death but the what of death. Delving into the vast body of research on the evolving nature of death, Modern Death will provide readers with an enriched understanding of how death differs from the past, what our ancestors got right, and how trends and events have transformed this most final of human experiences.

Perfect Pairs, 3-5 Melissa Stewart, Nancy Chesley, 2023-10-10 Hands-on lessons can be fun and compelling, but when it comes to life science, they aren't always possible, practical, effective, or safe. Children can't follow wolves as they hunt elk, visit a prehistoric swamp, or shrink down to the size of a molecule and observe photosynthesis firsthand. But they can explore a whole world of animals, plants, and ecosystems through the pages of beautifully illustrated science-themed picture books. Perfect Pairs, which marries fiction and nonfiction picture books focused on life science, helps educators think about and teach life science in a whole new way. Each of the twenty lessons in this book is built around a pair of books that introduces a critical life science concept and guides students through an inquiry-based investigative process to explore that idea, from life cycles and animal environment interactions to the inheritance of traits and the critical role of energy in our world. Each lesson starts with a Wonder Statement and comprises three stages: Engaging Students features a hands-on activity that captures student interest, uncovers current thinking, and generates vocabulary; The heart of the investigative process, Exploring with Students, spotlights the paired books as the teacher reads aloud and helps students find and organize information into data tables; Encouraging Students to Draw Conclusions shows students how to review and analyze the information they have collected. Bringing high-quality science-themed picture books into the classroom engages a broad range of students, addresses the Performance Expectations outlined in the Next Generation Science Standards, and supports the goals of the Common Core State Standards for English Language Arts. Even if you are science-shy, Perfect Pairs

can help you become a more confident teacher whose classroom buzzes with curious students eager to explore their natural world
