Bernoulli's Principle

What is Bernoulli's Principle?

Bernoulli's principle helps explain how an aircraft can fly by using the forces of lift, drag, thrust, and weight. It states that as the speed of a fluid (such as air) increases, the pressure within the fluid decreases. This means that air moving faster over the top of a wing creates a lower pressure area, which causes the wing to rise.

The bottom of the wing is generally flat, which causes the air to move faster over the top and slower over the bottom. This creates a pressure difference that causes the wing to rise.

For every object in the world, there is an equal and opposite reaction. This means that for every action, there is an equal and opposite reaction.

Assessment Answer the questions below using evidence from the text.

1. How does Bernoulli's principle explain lift?

2. How does air pressure affect lift?

Reading Read what you were learning about air pressure readings. Explain in your own words.
