and integrating fixed network protocols and services to mobile systems represents one of the main issues of present networking. The secondary focus of this volume is on challenges of mobility that is on technologies protocols and services for the support of seamless and nomadic user access to new classes of applications in person to person device to device and device to person environments. The book comprises recent results of research and development in the following areas: Seamless mobility, Mobile ad hoc and sensor networks, Analysis simulation and measurements of mobile and wireless systems, Integration and inter working of wired and wireless networks, QoS in mobile and wireless networks, Future trends and issues concerning mobility. This state of the art volume contains a collection of papers from two of the workshops of the 18th IFIP World Computer Congress held August 22-27 2004 in Toulouse France: the Workshop on Broadband Satellite Communication Systems and the Workshop on the Challenges of Mobility.

Comparative Competition Law John Duns, Arlen Duke, Brendan Sweeney, 2015-11-27. Comparative Competition Law examines the key global issues facing competition law and policy. This volume's specially commissioned chapters by leading writers from the United States, Europe, Asia, South America and Australia provide a synthesis of how these current issues are addressed by drawing on the approaches taken in different jurisdictions around the world. Expert contributors examine the regulation of core competitive conduct by comparing substantive law approaches in the US and the EU. The book then explores issues of enforcement such as the regulator's powers, whether to criminalize anti competitive conduct, the degree to which private enforcement ought to be encouraged and the extraterritorial scope of domestic laws. Finally, the book discusses how competition law is being implemented in a variety of countries including Japan, China, Brazil, Chile and Colombia. This scholarly analysis of the key substantive, procedural and remedial challenges facing global competition law policymakers offers a comparative framework to facilitate a better understanding of relevant policies. This collection of global perspectives will be of great interest to scholars and students of competition law, microeconomics and regulatory studies. Competition law regulators, policy makers and law practitioners will also find this book an invaluable resource.

Video-Based Surveillance Systems Graeme A. Jones, Nikos Paragios, Carlo S. Regazzoni, 2012-12-06. Monitoring of public and private sites has increasingly become a very sensitive issue resulting in a patchwork of privacy laws varying from country to country though all aimed at protecting the privacy of the citizen. It is important to remember however that monitoring and visual surveillance capabilities can also be employed to aid the citizen. The focus of current development is primarily aimed at public and corporate safety applications including the monitoring of railway stations, airports and inaccessible or dangerous environments. Future research effort however has already targeted citizen oriented applications such as monitoring assistants for the aged and infirm, route planning and congestion avoidance tools and a range of environmental monitoring applications. The latest generation of surveillance systems has eagerly

adopted recent technological developments to produce a fully digital pipeline of digital image acquisition digital data transmission and digital recording The resultant surveillance products are highly flexible capable of generating forensic quality imagery and able to exploit existing Internet and wide area network services to provide remote monitoring capability

Tropical Geometry and Mirror Symmetry Mark Gross, 2011-01-20 Tropical geometry provides an explanation for the remarkable power of mirror symmetry to connect complex and symplectic geometry The main theme of this book is the interplay between tropical geometry and mirror symmetry culminating in a description of the recent work of Gross and Siebert using log geometry to understand how the tropical world relates the A and B models in mirror symmetry The text starts with a detailed introduction to the notions of tropical curves and manifolds and then gives a thorough description of both sides of mirror symmetry for projective space bringing together material which so far can only be found scattered throughout the literature Next follows an introduction to the log geometry of Fontaine Illusie and Kato as needed for Nishinou and Siebert's proof of Mikhalkin's tropical curve counting formulas This latter proof is given in the fourth chapter The fifth chapter considers the mirror B model side giving recent results of the author showing how tropical geometry can be used to evaluate the oscillatory integrals appearing The final chapter surveys reconstruction results of the author and Siebert for integral tropical manifolds A complete version of the argument is given in two dimensions

Level Set Method in Medical Imaging Segmentation Ayman El-Baz,Jasjit S. Suri,2019-06-26 Level set methods are numerical techniques which offer remarkably powerful tools for understanding analyzing and computing interface motion in a host of settings When used for medical imaging analysis and segmentation the function assigns a label to each pixel or voxel and optimality is defined based on desired imaging properties This often includes a detection step to extract specific objects via segmentation This allows for the segmentation and analysis problem to be formulated and solved in a principled way based on well established mathematical theories Level set method is a great tool for modeling time varying medical images and enhancement of numerical computations
