How To Use Mitchell Estimating:

Estimating: by a practical estimator [G. Stephenson. The title-leaf is a cancel]. By G. Stephenson George Stephenson (author of Estimating.),1900 *Estimating and monitoring the costs of building roads in England* Great Britain: Parliament: House of Commons: Committee of Public Accounts,2007-11-08 The Department for Transport has approved expenditure of over 11 billion between 1998 and 2021 for the development of new and existing trunk roads and motorways by the Highways Agency and just under 1 7 billion on major road schemes proposed and developed by local authorities in five year Local Transport Plans Following on from a NAO report on this topic HCP 321 session 2006 07 ISBN 9780102944600 published in March 2007 the Committee s report examines the steps taken by the Department for Transport and the Highways Agency to improve value for money and oversight of the roads programme and contracting methods and project management capability By September 2006 the Agency s 36 completed schemes in the Targeted Programme of Improvement cost 40 per cent more than estimated initially and for schemes still to be completed latest forecasts indicate that final costs could be 27 per cent more than original estimates The main causes for costs exceeding estimates are increases in construction costs higher than forecast land prices and compensation to landowners inflation and changes in the scope of the project The report finds that the DfT has not been rigorous enough in its oversight of the Agency s delivery of major road schemes allowing it too much latitude on delivery and cost plans and has failed to monitor in year expenditure against progress and delivery milestones The Agency is overly reliant on consultants for project management expertise and needs to develop its in house capability

Water Loss Assessment in Distribution Networks Taha M. Al-Washali,2021-06-08 Water utilities worldwide lose 128 billion cubic meters annually causing annual monetary losses estimated at USD 40 billion Most of these losses occur in developing countries 74% This calls for rethinking the challenges facing water utilities in developing countries foremost of which is the assessment of water losses in intermittent supply networks Water loss assessment methods were originally developed in continuous supply systems and their application in intermittently operated networks in developing countries is hindered by the widespread use of household water tanks and unauthorised consumption This study provides an extensive review of existing methods and software tools for water loss assessment In addition several new methods were developed which offer improved water loss assessment in intermittent supply As the volume of water loss varies monthly and annually according to the amount of supplied water this study proposes procedures to normalise the volume of water loss in order to enable water utilities to monitor and benchmark their performance on water loss management The study also developed a novel method of estimating apparent losses using routine data of WWTP inflows enabling future real time monitoring of losses in networks Different methods have also been suggested to estimate the unauthorised consumption in networks This study found that minimum night flow analysis can still be applied in intermittent supply if an area of the network is supplied for several days Furthermore this study concluded that water meter performance

is enhanced in intermittent supply conditions However continuous supply in the presence of float valves significantly reduces the accuracy of water meters Finally this study provides guidance and highlights several knowledge gaps in order to improve the accuracy of water loss assessment in intermittent supply Accurate assessment of water loss is a prerequisite for reliable leakage modelling and minimisation as well as planning for and monitoring of water loss management in distribution networks
