

PLANNING THE INSTALLATION

WARNING

Fire or Explosion Hazard.
Can cause severe injury, death or property damage.

Follow these warnings exactly:

1. Plan the installation as outlined below.
2. Plan for frequent maintenance as described in the Maintenance section.
3. Review the following conditions that can apply to your specific installation and take the precautionary steps provided.

Frequent Cycling

This control is designed for use on appliances that typically cycle three to five times a day. In year-round applications with greater cycling rates of 10,000 cycles annually, the control can wear out more quickly. Perform a monthly checkout.

Water or Steam Cleaning

If a control gets submerged in water, replace it. If the appliance is likely to be cleaned with water or steam, protect (cover) the control and wiring from water or steam flow. Mount the control high enough above the bottom of the cabinet so it does not get wet during normal cleaning procedures.

High Humidity or Dripping Water

Dripping water can cause the control to fail. Never install an appliance where water can drip on the control. In addition, high ambient humidity can cause the control to corrode and fail. If the appliance is in a humid atmosphere, make sure air circulation around the control is adequate to prevent condensation. Also, regularly check out the system.

Corrosive Chemicals

Corrosive chemicals can attack the control, eventually causing a failure. If chemicals are used for routine cleaning, avoid contact with the control. Where chemicals are suspended in air, as in some industrial or agricultural applications, protect the control with a cover.

Dust or Grease Accumulation

Heavy accumulations of dust or grease can cause the control to malfunction. Where dust or grease can be a problem, provide covers for the control to limit contamination.

Heat

Excessively high temperature can damage the control. Make sure the maximum ambient temperature at the control does not exceed the rating of the control. If the appliance operates at very high temperatures, use insulation, shielding, and air circulation, as necessary, to protect the control. Proper insulation or shielding

should be provided by the appliance manufacturer. Verify proper air circulation is maintained when the appliance is installed.

Flow Capacity & Pressure Drop

Fig. 1 shows the typical flow (kBtu/hr) vs pressure drop (in. w.c.) curve for natural gas and LP gas. Actual pressure drop depends on the internal configuration of the valve. Table 2 shows the pressure drop at various flows for the control.

Fig. 1. Typical capacity curve for WT88xx family of water heater control systems.

Table 2. Gas capacity conversion for WT88xx controls.

Gas Type	Flow (kBtu/hr)	Pressure Drop (in. w.c.)
NG	30	1.43
	50	1.47
	75	1.54
LP	30	0.91
