National Security and Investment Controls Jens Hillebrand Pohl, Thomas Papadopoulos, Janosch Wiesenthal, 2024-09-16

This third volume in the Springer Studies in Law and Geoeconomics series continues to advance the interdisciplinary field of investment control. With a primary focus on geoeconomic strategies, this book examines the evolving legal and regulatory frameworks that govern foreign direct investment (FDI). The volume addresses critical issues such as investment screening, foreign subsidies, and the balance between national security and economic interests. By exploring these themes through an international, transnational, and comparative law perspective, the book offers valuable insights into the mechanisms and implications of investment controls in a globalized economy. Contributors provide a detailed analysis of current practices and propose innovative approaches to the challenges posed by FDI in contemporary geopolitical contexts. This book is an essential resource for policymakers, legal scholars, and practitioners involved in the regulation of international investments. *The*

21st Century Industrial Robot: When Tools Become Collaborators Maria Isabel Aldinhas Ferreira, Sarah R.

Fletcher, 2021-10-25. This book aims to discuss the technical and ethical challenges posed by the present technological framework and to highlight the fundamental role played by human-centred design and human factors in the definition of robotic architectures for human-robot collaboration. The book gives an updated overview of the most recent robotic technology conceived and designed to collaborate with human beings in industrial working scenarios. The technological development of robotics over the last years and the fast evolution of AI, machine learning, and IoT have paved the way for applications that extend far beyond the typical use of robots performing repetitive tasks in exclusive spaces. In this new technological paradigm that is expected to drive the robotics market in the coming years, robots and workers will coexist in the same workplace, sharing not only this lived space but also the roles and functions inherent to a process of production, merging the benefits of automated and manual performing. However, having robots cooperating in real time with workers responding in a physical, psychological, and social adequate way requires a human-centred design that not only calls for high safety standards regulating the quality of human-robot interaction but also demands the robot's fine-grained perception and awareness of the dynamics of its surrounding environment, namely the behaviours of their human peers, their expected actions, responses, fostering the necessary collaborative efforts towards the accomplishment of the tasks to be executed.

Industrial Robot Applications E. Appleton, D.J. Williams, 2012-12-06. The hardest data for managers and engineers in charge of the design and implementation of robot systems to acquire is also the most valuable: case studies detailing best current practice and the return on investment actually achieved. It has been a major goal of the British Robot Association, among other professional groups, to organise meetings where such case studies are presented and discussed between members, but the obvious restrictions of commercial confidentiality lead to considerable difficulty, especially in relation to the best recent installations. The authors of this book have been in the uniquely privileged position of lecturing in the Cambridge

University Production Engineering Tripos a course specially organised in conjunction with a number of leading companies applying robots and automation Actual case studies from these companies form an important part of the course making this book that has emerged from it a uniquely important addition to our Open University Press series *Recent Global Research and Education: Technological Challenges* Ryszard Jabłoński,Roman Szewczyk,2016-09-22 Developments in the connected fields of solid state physics bioengineering mechatronics and nanometrology have had a profound effect on the emergence of modern technologies and their influence on our lives In all of these fields understanding and improving the basic underlying materials is of crucial importance for the development of systems and applications The International Conference Inter Academia 2016 has successfully married these fields and become a regular feature in the conference calendar It consisted of seven thematic areas in the field of material science nanotechnology biotechnology plasma physics metrology robotics sensors and devices The book *Recent Global Research and Education Technological Challenges* is intended for use in academic government and industry R D departments as an indispensable reference tool for the years to come Also we hope that the volume can serve the world community as the definitive reference source in *Advances in Intelligent Systems and Computing* This book comprises carefully selected 68 contributions presented at the 15th International Conference on Global Research and Education INTER ACADEMIA 2016 organized by Faculty of Mechatronics Warsaw University of Technology on September 26 28 in Warsaw Poland It is the second volume in series following the edition in 2015 It brings together the knowledge and experience of 150 leading researchers representing 13 countries We would like to thank all contributors and reviewers for helping us to put together this book **Rob|Arch 2012** Sigrid Brell-Cokcan,Johannes Braumann,2013-12-16 This volume collects about 20 contributions on the topic of robotic construction methods It is a proceedings volume of the robarch2012 symposium and workshop which will take place in December 2012 in Vienna Contributions will explore the current status quo in industry science and practitioners The symposium will be held as a biennial event This book is to be the first of the series comprising the current status of robotics in architecture art and design **Intelligent Information and Database Systems** Paweł Sitek,Marcin Pietranik,Marek Krótkiewicz,Chutimet Srinilta,2020-03-03 This volume constitutes the refereed proceedings of the 12th Asian Conference on Intelligent Information and Database Systems ACIIDS 2020 held in Phuket Thailand in March 2020 The total of 50 full papers accepted for publication in these proceedings were carefully reviewed and selected from 180 submissions The papers are organized in the following topical sections advanced big data machine learning and data mining industry applications of intelligent methods and systems artificial intelligence optimization and databases in practical applications intelligent applications of internet of things recommendation and user centric applications of intelligent systems **Learning Factories** Eberhard Abele,Joachim Metternich,Michael Tisch,2018-10-10 This book presents the state of the art of learning factories It outlines the motivations historic background and the didactic foundations of learning factories Definitions of the term learning factory and a corresponding morphological model are
