

### Brake Controls, Functions, and Air Lines

**Parking Brake Control:** The park or emergency brake is spring applied and air released. A released valve built into the control won't allow the park brake to be released until a load pressure is put in as low as 100 psi (6.9 kPa, 1000 ft head). The same valve allows the release of control pressure to lock. To apply the park or emergency brake push in or control valve. To release the brake, pull out on the valve.

**Service Brake Control:** To apply service brakes, push control forward. To release service brakes, pull control to the rear.

**Note:** Don't operate an air valve until you're sure it's safe to do so.

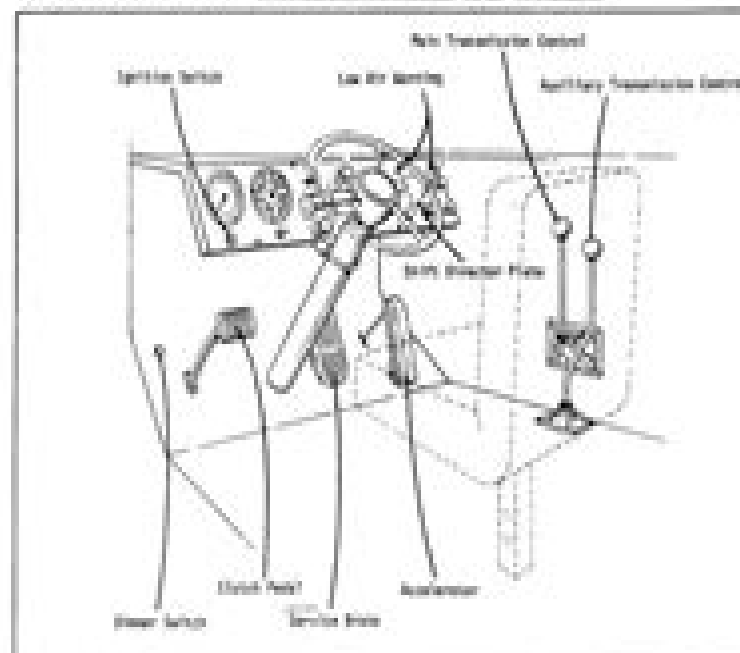

### Function Brake Control

The parking brake control actuates a spring applied, hydraulically released brake, mounted on the wheel shaft in the carrier. It is operated as follows:

- Start the engine and let the Speed-Safe® pressure build up. The pressure must be at least 100 psi (6.9 kPa) before the brake can be released.
- Pull out on the control to release the brake.
- Push in on the control to apply the brake.

**Note:** The brake will apply if pressure falls below 100 psi (6.9 kPa) for an air system or 100 ft (30.5 m) head.

**Note:** This brake is not used on machines with 100 ft (30.5 m) head.

### Low Air Control System

The following series of paragraphs explain the operation of the various controls on the carrier. This information should be read and thoroughly understood before attempting to operate the carrier.

**Ignition Switch:** The ignition switch is controlled by a key to prevent starting of the engine in unauthorized persons. The key action must be turned fully to the right to engage the engine starter.

The key must be in the on position to permit use of the accelerator.

**Accelerator:** The accelerator is located on the right in a.c.h., and the carrier is traveling.

**Ignition Switch:** The ignition switch is controlled by a key to prevent starting of the engine in unauthorized persons. The key action must be turned fully to the right to engage the engine starter.

**Low Air Control:** The low air control is located on the right in a.c.h., and the carrier is traveling.

**Service Brake Control:** The service brake control is located on the right in a.c.h., and the carrier is traveling.

**Note:** This brake must be applied when operating from the water.

**Note:** Don't use the brake when the carrier is in the water.

**Park or Emergency Brake Control:** The park or emergency brake control is spring applied and air released. A released valve built into the control won't allow the park brake to be released until a load pressure is put in as low as 100 psi (6.9 kPa, 1000 ft head). The same valve allows the release of control pressure to lock. To apply the park or emergency brake push in or control valve. To release the brake, pull out on the valve.
