

Electro/electronic PLC crane control with test system

- Control of the rotation, steering gear and the lifting and lowering motions by the LCU/PLC computer system
- PLC control
- Four working motions can be performed independently from one another
- Speeds for lifting/lowering, lifting and lowering procedures by 5 steps
- Step drill response rate of the activation of every motion
- Test gear and steering gear are operating within a "load all over". This enables very sensitive identification of loads, in driving, moreover, during lowering of the load, the generated rotational energy is not converted into heat but can be re-employed for a 2nd motion. This saves fuel and the oil is less thermally expanded than by operation within the rated torque
- Functional test of all essential components by means of the LCU/PLC test system
