Kenneth Tan, Osvaldo Gervasi, 2004-04-29 The natural mission of Computational Science is to tackle all sorts of human problems and to work out intelligent automata aimed at alleviating the burden of working out suitable tools for solving complex problems For this reason Computational Science though originating from the need to solve the most challenging problems in science and engineering computational science is the key player in the fight to gain fundamental advances in astronomy biology chemistry environmental science physics and several other scientific and engineering disciplines is increasingly turning its attention to all fields of human activity In all activities in fact intensive computation information handling knowledge synthesis the use of ad hoc devices etc increasingly need to be exploited and coordinated regardless of the location of both the users and the various and heterogeneous computing platforms As a result the key to understanding the explosive growth of this discipline lies in two adjectives that more and more appropriately refer to Computational Science and its applications interoperable and ubiquitous Numerous examples of ubiquitous and interoperable tools and applications are given in the present four LNCS volumes containing the contributions delivered at the 2004 International Conference on Computational Science and its Applications ICCSA 2004 held in Assisi Italy May 14-17 2004

Conference Record, 2004 The Global Underworld Donald R. Liddick, 2004-07-30 Transnational crime is an increasing national security threat to the United States and to individual citizens around the world Criminal groups both in the United States and abroad operate crime cartels that span national boundaries but in ways that affect all Americans and wreak havoc on law enforcement organizations as well as businesses and other entities such as the stock market More often than not transnational crime takes the form of organized crime and in its many forms is responsible for overpriced goods unsafe products environmental hazards corruption of public officials the exploitation of women and children tax evasion theft and piracy identity theft organ smuggling stock market fraud drug trafficking and black market trading in armaments and weapons of mass destruction among other scandals and forms of misconduct Because perpetrators often act in collusion with legitimate organizations and other powerful elites who either cooperate knowingly or unknowingly or are coerced through violence dealing with the problem is especially difficult Here Liddick describes the many groups responsible for transnational crimes and the nature and scale of their various enterprises The result is a powerful testament to the globalization of criminal organizations and their danger to American society From the Russian mafiya to Chinese Triads from outlaw motorcycle gangs to Latin American drug cartels the nature and incidence of transnational crime is a

serious threat to American security both at the national and the individual level Because of America s porous borders it is relatively easy for criminal foreigners to set up their organizations within the United States Moreover there are well established groups already present in the United States that are now capable of operating on a multinational level While response to the problem has been overdue recent efforts to address transnational crime include technological innovations and controversial legislation such as the Patriot Act and the Homeland Security Act But how well will these measures protect Americans from the increasing prevalence of criminal organizations that are capable of carrying out crimes that span the globe This important book provides an engaging glimpse into the world of transnational crime through an introduction to the various groups involved true stories of criminal misconduct and a careful review and evaluation of efforts to address the problem
