Manufacturing the Mathematical Child Anna Llewellyn, 2018-05-15 Mathematics is a subject held in high esteem around the world yet the teaching and learning of mathematics is rarely viewed as good enough and many find the subject difficult to comprehend or engage with In *Manufacturing the Mathematical Child* Anna Llewellyn asks some difficult questions in order to determine why this is the case and to question who it is that we allow to succeed at mathematics particularly within the context of neoliberalism where education is a product of the market By looking at the various sites of production Llewellyn examines the ways that key discursive spaces produce very different expectations of what it means to do mathematics and demonstrates that these place various homogenised expectations upon children Arguing that these are not natural but instead a reproduction of discursive norms the book demonstrates why some people fit these standardized ways of being and others do not Using England as a case study and referring to other international contexts Llewellyn argues that there is a functionality found within certain educational policy discourses and a romantic attachment to the natural child found within educational research neither of which can match what happens in the messy classroom As a result it becomes evident that exclusion from mathematics is inevitable for many children Original and exciting this book will be of great interest to academics researchers and postgraduate students within the fields of mathematics education childhood studies policy studies and Foucauldian or post structural analysis

Mathematical Intelligence Mubeen Junaid, 2022-11-01 A fresh exploration into the human nature versus technology argument revealing an unexpected advantage that humans have over our future robot masters we re actually good at mathematics There s so much discussion about the threat posed by intelligent machines that it sometimes seems as though we should simply surrender to our robot overlords now But Junaid Mubeen isn t ready to throw in the towel just yet As far as he is concerned we have the creative edge over computers because of a remarkable system of thought that humans have developed over the millennia It s

familiar to us all but often badly taught in schools and misrepresented in popular discourse math Computers are of course brilliant at totting up sums pattern seeking and performing mindless tasks of well computation For all things calculation machines reign supreme But Junaid identifies seven areas of intelligence where humans can retain a crucial edge And in exploring these areas he opens up a fascinating world where we can develop our uniquely human mathematical talents Just a few of the fascinating subjects covered in MATHEMATICAL INTELLIGENCE include Humans are endowed with a natural sense of numbers that is based on approximation rather than precise calculation Our in built estimation skills complement the precision of computers Interpreting the real world depends on both What sets humans apart from other animals is language and abstraction We have an extraordinary ability to create powerful representations of knowledge more diverse than the binary language of computers Mathematics confers the most robust logical framework for establishing permanent truths Reasoning shields us from the dubious claims of pure pattern recognition systems All mathematical truths are derived from a starting set of assumptions or axioms Unlike computers humans have the freedom to break free of convention and examine the logical consequences of our choices Mathematics rewards our imagination with fascinating and on occasion applicable concepts that originate from breaking the rules Computers can be tasked to solve a range of problems but which problems are worth the effort Questioning is as vital to our repertoire of thinking skills as problem solving itself The PISA Effect on Global Educational Governance Louis Volante,2017-09-18 The Program for International Student Assessment PISA is an international achievement measure that assesses 15 year old student performance in the areas of reading mathematics and science literacy in over 70 countries and economies triennially By presenting an in depth examination of PISA s role in education governance and policy discourses this book provides the reader with a critical analysis of the educational change process within our increasingly global educational policy environment Exploring the prominent socio political drivers of large scale educational reform across the globe chapter authors examine PISA s national and global implications from a diverse range of regional contexts Through the presentation of cross disciplinary viewpoints and topical issues related to the PISA international survey this volume explains the degree to which PISA focused research is linked to national educational policy discourses and international education agendas **12 YEAR-WISE CTET Paper 1 Solved Papers (2011 - 2019) - 2nd English Edition** Disha Experts,2019-09-06 Examcart NDA/NA Maths & GAT 36 Chapter-wise Solved Papers for 2024 Exam in English Examcart Experts, *Thrive* Martha Boyne,Emily Clements,Ben Wright,2018-05-18 Martha Boyne Emily Clements and Ben Wright s *Thrive* In your first three years in teaching equips trainee secondary school teachers with the know how to lay the foundations for a successful career in teaching long after the challenging first few years are over Martha Emily and Ben are thriving teachers In *Thrive* they share their personal experiences and demonstrate how you too can thrive during the tricky training year the daunting NQT year and the crucial RQT year Using their collective insights and plenty of evidence informed strategies and advice they detail how you can get to grips with the classroom basics from behaviour
