Making Every Maths Lesson Count Emma McCrea, 2019-05-01

In *Making Every Maths Lesson Count*, six principles to support great maths teaching are presented. Experienced maths teacher and lecturer Emma McCrea takes away the guesswork as she sums up the key components of effective maths teaching. Maths classrooms are incredibly complex places. At any given time, the factors influencing the effectiveness of your teaching are boundless, and this can lead to relying on intuition as to what might work best. This book aims to signpost a route through this complexity. Writing in the practical, engaging style of the award-winning *Making Every Lesson Count*, Emma McCrea helps teachers to move beyond trial and error by sharing evidence-informed tips and suggestions on how they can nudge the impact of their teaching in the right direction. *Making Every Maths Lesson Count* is underpinned by six pedagogical principles: challenge, explanation, modelling, practice, feedback, and questioning, and presents 52 high-impact strategies designed to streamline teacher workload and ramp up the level of challenge in the maths classroom. The book draws out the key findings from the latest research on memory, learning, and motivation, and each chapter features numerous worked examples to demonstrate the theory in action, together with a concluding series of questions that will help maths practitioners relate the content to their own classroom practice. Furthermore, Emma's writing offers clarity around the language of maths teaching and learning, and also delves into the finer points of how to identify and address any misconceptions that students may hold. Written for new and experienced practitioners alike, this gimmick-free guide provides sensible solutions to perennial problems and inspires a rich, challenging, and evidence-based approach to the teaching of maths. Suitable for maths teachers of students aged 11 to 18 years and for primary school maths specialists.

Mathematics without Apologies Michael Harris, 2017-05-30

An insightful reflection on the mathematical soul. What do pure mathematicians do, and why do they do it? Looking beyond the conventional answers for the sake of truth, beauty, and practical applications, this book offers an eclectic panorama of the lives and values, hopes and fears, of mathematicians in the twenty-first century, assembling material from a startlingly diverse assortment of scholarly, journalistic, and pop culture sources. Drawing on his personal experiences and obsessions, as well as the thoughts and opinions of mathematicians from Archimedes and Omar Khayyam to such contemporary giants as Alexander Grothendieck and Robert Langlands, Michael Harris reveals the charisma and romance of mathematics, as well as its darker side. In this portrait of mathematics as a community united around a set of common intellectual, ethical, and existential challenges, he touches on a wide variety of questions such as: Are mathematicians to blame for the 2008 financial crisis? How can we talk about the ideas we were born too soon to understand? And how should you react if you are asked to explain number theory at a dinner party? Disarmingly

candid relentlessly intelligent and richly entertaining Mathematics without Apologies takes readers on an unapologetic guided tour of the mathematical life from the philosophy and sociology of mathematics to its reflections in film and popular music with detours through the mathematical and mystical traditions of Russia India medieval Islam the Bronx and beyond

Religion in Secular Education Cathy Byrne, 2014-01-09 Cathy Byrne presents the secular principle as a guiding compass for religion in government schools in plural democracies Using in depth case studies historical and contextual research from Australia and comparisons with other developed nations Religion in Secular Education provides a comprehensive at times confronting analysis of the ideologies policies pedagogies and practices for state school religion In the context of rising demands for students to develop intercultural competence and interreligious literacy and alongside increasing Christian evangelism in the public arena this book highlights risks and implications as education develops religious identity in individual children and in nation states Byrne proposes a best practice framework for nations attempting to navigate towards socially inclusive outcomes and critical thinking in religions education policy *Mathematics and Computing* Debdas Ghosh, Debasis Giri, Ram N. Language in Epistemic Access Caroline Kerfoot, Anne-Marie Simon-Vandenberg, 2018-07-26 This book focuses on how to address persistent linguistically structured inequalities in education primarily in relation to South African schools but also in conversation with Australian work and with resonances for other multilingual contexts around the world The book as a whole lays bare the tension between the commitment to multilingualism enshrined in the South African Constitution and language in education policy and the realities of the dominance of English and the virtual absence of indigenous African languages in current educational practices It suggests that dynamic plurilingual pedagogies can be allied with the explicit scaffolding of genre based pedagogies to help redress asymmetries in epistemic access and to re-imagine policies pedagogies and practices more in tune with the realities of multilingual classrooms The contributions to this book offer complementary insights on routes to improving access to school knowledge especially for learners whose home language or language variety is different to that of teaching and learning at school All subscribe to similar ideologies which include the view that multilingualism should be seen as a resource rather than a problem in education Commentaries on these chapters highlight evidence based high impact educational responses and suggest that translanguaging and genre may well offer opportunities for students to expand their linguistic repertoires and to bridge epistemological differences between community and school This book was originally published as a special issue of Language and Education

The Age of Post-Rationality Val Colic-Peisker, Adrian Flitney, 2017-10-24 This book challenges the hegemonic view that economic calculation represents the ultimate rationality The West legitimises its global dominance by the claim to be a rational democratic science based and progressive civilisation Yet over the past decades the dogma of economic rationality has become an ideological black hole whose gravitational pull allows no public debate or policy to escape Political leaders of all creeds are held in its orbit and public language is saturated by it This dogma has pervaded all spheres of life ushering the age of post rationality especially in English speaking countries The authors discuss several aspects of post rational global capitalism still dominated by the Anglosphere hyper competition hyper consumption inequality volatile global financial markets environmental degradation and the unforeseen effects of the internet mediated communication revolution The book concludes by discussing some utopian and dystopian future scenarios

these applications of e Learning There were 36 interesting examples described in these abstracts which were invited to forward a completed case history The panel of experts then chose 12 case history finalists who were invited to present their work at the 14th annual European Conference on e Learning at the University of Hertfordshire at Hatfield in the UK in October 2015 As can be seen from the Contents page the topics presented range widely as was expected when working with a subject like e Learning It may also be observed that the entrants come from many different parts of the world The competition requires the 3 best to be chosen and it is clear that the judges will have a challenging task to select the winners
