 This book is the fourth in a multidisciplinary series which brings together leading researchers in the STEAM H disciplines
 Science Technology Engineering Agriculture Mathematics and Health to present their perspective on advances in their own
 specific fields and to generate a genuinely interdisciplinary collaboration that transcends parochial subject matter
 boundaries All contributions are carefully edited peer reviewed reasonably self contained and pedagogically crafted for a
 multidisciplinary readership Contributions are drawn from a variety of fields including mathematics statistics game theory
 and behavioral sciences biomathematics and physical chemistry computer science and human centered computing This
 volume is dedicated to Professor Christiane Rousseau whose work inspires the STEAM H series in recognition of her passion
 for the mathematical sciences and her on going initiative the Mathematics of Planet Earth paradigm of interdisciplinarity The
 volume s primary goal is to enhance interdisciplinary understanding between these areas of research by showing how new
 advances in a particular field can be relevant to open problems in another and how many disciplines contribute to a better
 understanding of relevant issues at the interface of mathematics and the sciences The main emphasis is on important
 methods research directions and applications of analysis within and beyond each field As such the volume aims to foster
 student interest and participation in the STEAM H domain as well as promote interdisciplinary research collaborations The
 volume is valuable as a reference of choice and a source of inspiration for a broad spectrum of scientists mathematicians

Aerospace Engineering Mykola Nechyporuk, Volodymyr Pavlikov, Dmytro Krytskyi, 2023-11-10 This book proposes a solution to the problem of incorrect use of automation tools to perform complex design work. Currently, a large number of start-up projects are non-professional design bureaus that show a huge amount of their achievements. In reality, most of these achievements burst like soap bubbles. This is due to the low quality and inefficient use of information technology in this industry. The book highlights advanced information technologies in the fields of design, machine learning, and computer vision.

Mathematics for Healthcare Krasimira Tsaneva-Atanasova, Vanessa Diaz-Zuccarini, 2018-09-28 In 1996 and with extraordinary prescience Panfilov and Holden had highlighted in their seminal book *Computational Biology of the Heart* that biology was potentially the most mathematical of all sciences. Fast forward 20 years and we have seen an explosion of applications of mathematics in not only biology but healthcare that has already produced significant breakthroughs not imaginable more than 20 years ago. Great strides have been made in explaining through quantitative methods the underlying mechanisms of human disease not without considerable ingenuity and effort. Biological mechanisms are bewilderingly complex, ever-evolving, multi-scale, variable, difficult to fully access and understand. This poses immense challenges to the computational physiology community that nevertheless has developed an impressive arsenal of tools and methods in a vertiginous race to combat disease with the tall order of improving human healthcare. Mechanistic models are now contending with the advent of machine learning in healthcare and the hope is that both approaches will be used synergistically since the complexity of human pathophysiology and the difficulty of acquiring human datasets will require both deductive and inductive methods. This Research Topic presents work that is currently at the frontier in computational physiology with a striking range of applications from diabetes to graft failure and using a multitude of mathematical tools. This collection of articles represents a snapshot in a field that is moving at a dizzying speed, bringing understanding of fundamental mechanisms and solutions to healthcare problems experienced by healthcare systems all over the world.
